This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

REPORT

TO

The Right Honourable CHARLES T. RITCHIE, M.P., President of the Local Government Board, &c. &c.

(1889.)

SIR,

I HAVE the honour to submit to you the following report on the births, marriages, and deaths registered in England and Wales in the year 1889.

POPULATION.

The population of England and Wales, as enumerated in April 1881, consisted of 25,974,439 persons. The natural increase, or the excess of births over deaths from that date to the middle of 1889 amounted to 3,067,314; so that the population at the later date, could its growth be determined simply by the balance between births and deaths, would have been 29,041,753. Emigration and immigration cannot, however, be disregarded in an estimate of the population; and, in the absence of sufficiently full information on these points, the estimated populations published in the Annual Reports are based on the assumption that the rate of increase which prevailed in the last intercensal period has since been maintained, a method which, it has been shown (see pp. v–vi of 50th Annual Report), is not likely to lead to serious error when so large an area as the entire country is dealt with.

The population, thus estimated, in the middle of the year 1889 was 29,015,613, consisting of 14,119,824 males and 14,895,789 females (Table 1). It is on this estimated population that the rates in this report have been calculated.

MARRIAGES.

The number of marriages registered in the year 1889 was 213,865, corresponding to a rate of 14·7 persons married per 1000 living. This is a higher rate than that in any year since 1884, when it was 15·0, declining to 14·4 in the following year, and to 14·1, the lowest on record, in 1886; while both in 1887 and 1888 the rate was 14·2. An examination of the rates in counties shows that the rise was general, excepting that in Berkshire, Dorsetshire, and Leicestershire the rate in 1889, as compared with that in the preceding year, was stationary, and that in Hertfordshire, Huntingdonshire, Norfolk, and Rutlandshire there was a slight decline. The rise was equal to 9·7 per cent. in Buckinghamshire, 11·2 in Derby, 13·0 in Herefordshire, 13·8 in Northumberland, 14·7 in Westmorland, 16·7 in Bedfordshire, and 17·7 in Monmouthshire. In London the improvement was very slight.

Continuing the comparison, which has been drawn in former reports, of the marriage-rate with the value of British exports and with the price of wheat, it is noteworthy that, though the marriage-rate and the mean

First marriages; Re-marriages.—The marriages of bachelors, spinsters, widowers, and widows in 1889 all show an increase as compared with the marriages of persons of these several conditions in the previous year; but while the proportionate numerical increase of bachelors who married was 5·4 per cent., and that of spinsters 5·2 per cent., the proportionate numerical increase of widowers who married was but 1·4 per cent., and that of widows 2·4 per cent. It will be seen in Table 7 that, of 1000 men who married in 1889, 885 were bachelors, and 115 were widowers; and, of 1000 women who married, 919 were spinsters and 81 widows. The proportions of widowers and widows show a still further decline.

Re-marriages of Divorced Persons.—The number of persons married in 1889 who were described in the register as having been previously divorced was 150, including 75 men and 75 women; the number of such persons married was smaller than in recent years, for in the preceding four years the numbers were 170, 163, 173, and 178 respectively. Of the 75 divorced men, 59 married spinsters, 14 married widows, and 2 married divorced women. Of the 75 divorced women, 62 married bachelors, 11 married widowers, and 2 married divorced men.

Ages at Marriage.—In 8,062, or 3·8 per cent., of the marriages, the ages of both contracting parties were not inserted in the register. In 1888 the proportion was 5·0 per cent., to which it had gradually fallen, as was stated in the last Report, from such high proportions as 40·6 in 1858 and 21·1 in 1878. The mean age of the 205,803 couples, whose ages were stated, was 28·23 years for men, and 25·95 years for women. As was pointed out in the Forty-eighth Report (pp. viii, ix) there has been since 1873, concurrently with a falling marriage-rate, a steady rise in the mean ages at marriage. In 1889, however, though there was an appreciable rise in the marriage-rate, this increase in the mean ages at marriage was arrested, for in the preceding year the mean age had been 28·29 years for men, and 25·97 years for women. There was a further decline in 1889 in the marriages of males under age, the proportion in 1,000 marriages being 61, while the proportion of females under age was 199, or the same as it was in 1888.

Signature in Marriage Register.—The men who in 1889 signed the marriage register with marks instead of writing their names were in the proportion of 78 in 1000, and the women in that of 90 in 1000; while in 27 out of 1000 marriages both husband and wife used that form of signature. With the progress of elementary education there has been a constant diminution in the proportion of both men and women signing with marks; and in 1889 the proportion, as compared with that for 1888, showed a reduction of 6·0 per cent. for men and of 7·2 per cent. for women.

Buildings registered for the Solemnisation of Marriages.—At the end of 1889 there were 14,966 Churches or Chapels belonging to the Established Church in which marriages could be solemnised, showing an increase of 43 upon the number at the end of the preceding year. There were also 10,335 buildings registered for marriage by other rites than those of the Established Church (Table 9), showing an increase of 219, or 2·2 per cent. upon the number on the register at the end of 1888.

Certified Places of Worship.—During the year 1889, 633 new buildings were certified for religious worship under the provisions of the Acts 15 & 16 Vict. c. 36, and 18 & 19 Vict. c. 81, while 151 buildings already certified were removed from the register by cancellation; the number of

value of exports per head of population rose together, as is the general rule, the average price of wheat fell and was 6·5 per cent. under the low average price of the preceding year.

1889	14·7	6 11 2	11 6 1	19 12 6	29 9	263

* The figures in the marriage-rate column are not strictly comparable with those in the value columns, inasmuch as the former relate only to England and Wales, while the latter relate to the whole of the United Kingdom. The figures relating to exports and imports and to the price of wheat are derived from the Board of Trade Statistical Abstracts; and those showing the amount cleared at the London Bankers' Clearing House are calculated upon the population of England and Wales, and are derived from the same source.

Forms of Marriage.—Of the 213,865 marriages contracted in the year, 149,356, or 698 per 1000, were celebrated according to the rites of the Established Church, and 64,509, or 302 per 1000, otherwise. These proportions show a further development of the tendency, alluded to in former reports, for church marriages to decline, the proportion of such marriages in 1889 being the lowest yet recorded. The increase in the proportion of other marriages was principally, as usual, under the head of civil marriages in Superintendent Registrars' offices. The proportions of Roman Catholic marriages and those of other Christian denominations were the same in 1889 as in the preceding year, while there was again an increase in the proportion of marriages by Jewish rites (Table 5).

The proportion of marriages that are celebrated after publication of banns has remained very constant for some years, having fluctuated only between 628 and 632 per 1000 marriages of all kinds in the course of eight years. But when these marriages after banns are compared merely with the total of Church marriages, there is a manifest tendency to increase, this increase taking place at the expense of marriages by licence and marriages by Superintendent Registrar's certificate. The proportion rose steadily year by year from 870 per 1000 in 1880 to 906 per 1000 in 1889.

First marriages; Re-marriages.—The marriages of bachelors, spinsters, widowers, and widows in 1889 all show an increase as compared with the marriages of persons of these several conditions in the previous year; but while the proportionate numerical increase of bachelors who married was 5·4 per cent., and that of spinsters 5·2 per cent., the proportionate numerical increase of widowers who married was but 1·4 per cent., and that of widows 2·4 per cent. It will be seen in Table 7 that, of 1000 men who married in 1889, 885 were bachelors, and 115 were widowers; and, of 1000 women who married, 919 were spinsters and 81 widows. The proportions of widowers and widows show a still further decline.

Re-marriages of Divorced Persons.—The number of persons married in 1889 who were described in the register as having been previously divorced was 150, including 75 men and 75 women; the number of such persons married was smaller than in recent years, for in the preceding four years the numbers were 170, 163, 173, and 178 respectively. Of the 75 divorced men, 59 married spinsters, 14 married widows, and 2 married divorced women. Of the 75 divorced women, 62 married bachelors, 11 married widowers, and 2 married divorced men.

Ages at Marriage.—In 8,062, or 3·8 per cent., of the marriages, the ages of both contracting parties were not inserted in the register. In 1888 the proportion was 5·0 per cent., to which it had gradually fallen, as was stated in the last Report, from such high proportions as 40·6 in 1858 and 21·1 in 1878. The mean age of the 205,803 couples, whose ages were stated, was 28·23 years for men, and 25·95 years for women. As was pointed out in the Forty-eighth Report (pp. viii, ix) there has been since 1873, concurrently with a falling marriage-rate, a steady rise in the mean ages at marriage. In 1889, however, though there was an appreciable rise in the marriage-rate, this increase in the mean ages at marriage was arrested, for in the preceding year the mean age had been 28·29 years for men, and 25·97 years for women. There was a further decline in 1889 in the marriages of males under age, the proportion in 1,000 marriages being 61, while the proportion of females under age was 199, or the same as it was in 1888.

Signature in Marriage Register.—The men who in 1889 signed the marriage register with marks instead of writing their names were in the proportion of 78 in 1000, and the women in that of 90 in 1000; while in 27 out of 1000 marriages both husband and wife used that form of signature. With the progress of elementary education there has been a constant diminution in the proportion of both men and women signing with marks; and in 1889 the proportion, as compared with that for 1888, showed a reduction of 6·0 per cent. for men and of 7·2 per cent. for women.

Buildings registered for the Solemnisation of Marriages.—At the end of 1889 there were 14,966 Churches or Chapels belonging to the Established Church in which marriages could be solemnised, showing an increase of 43 upon the number at the end of the preceding year. There were also 10,335 buildings registered for marriage by other rites than those of the Established Church (Table 9), showing an increase of 219, or 2·2 per cent. upon the number on the register at the end of 1888.

Certified Places of Worship.—During the year 1889, 633 new buildings were certified for religious worship under the provisions of the Acts 15 & 16 Vict. c. 36, and 18 & 19 Vict. c. 81, while 151 buildings already certified were removed from the register by cancellation; the number of

buildings so certified on the register at the end of the year was 26,433. It is probable, however, that some of these are no longer used, though no steps have been taken to remove them from the register by cancellation.

BIRTHS.

The births registered in the year numbered 885,944, and were in the proportion of 30·5 to 1000 persons living. This is the lowest birth-rate recorded in any of the last 50 years, and a further step in the decline which has gone on continuously since 1876, when the birth-rate was 36·3, and at its maximum. (Table 2.)

The estimates of the living population in single counties, in a year so far removed from the last enumeration, are of course doubtful; but, accepting such estimates as correct, the rate varied from 24·7 in Rutlandshire, 24·8 in North Wales, 25·0 in Sussex, 26·1 in Herefordshire, and 26·9 in Surrey (extra-met.), to 33·2 in South Wales, 33·8 in Staffordshire, 33·9 in Durham, 35·0 in Essex, and 36·8 in Monmouthshire, most of the latter being mining counties, in which the birth-rate is almost invariably high. (Table 10.)

Sex.—The male births numbered 451,218, and the female births 434,726, the former being to the latter in the proportion of 1038 to 1000, which was also the proportion in the preceding decennium 1879–88.

Illegitimate Births.—The infants registered as born out of wedlock numbered 40,627, being in the proportion of 1·4 to 1000 of the population, and 46 to 1000 registered births; these proportions being the same as in the immediately preceding year, 1888, but otherwise the lowest on record. (Table 2). The registration counties in which the proportion of illegitimate to total births was highest were, as usual, Norfolk, Herefordshire, Shropshire, Cumberland, Westmorland, and North Wales. (Table 10.)

DEATHS.

The deaths registered in the year numbered 518,353, and were in the proportion of 17·9 to 1000 of the estimated population. In the next preceding year the proportion had been 17·8, and these two rates are by far the lowest as yet recorded, the next lowest having, moreover, been that of the immediately preceding year 1887, when the rate was 18·8. In each of the nine years of the current decennium the recorded rate has been under 20·0, whereas in no previous year had it ever fallen so low as that point. (Table 2.)

County death-rates.—It has been mentioned already that the estimates of the population of separate counties are not very trustworthy; accepting them, however, as accurate, the death-rate in every county in 1889 was below the previous decennial average, with the exceptions of Northumberland, and Westmorland; but varied from 13·7 in Sussex, 14·0 in Surrey (extra-met.), 14·3 in Berkshire, and 14·8 in Rutlandshire and Huntingdonshire, to 19·1 in Durham, 19·3 in South Wales, 19·4 in the West Riding, 20·3 in Monmouthshire, 20·9 in Northumberland, and 21·0 in Lancashire, the geographical distribution of low and high rates being much the same as in the previous decennium. (Table 10.)

Sex.—The 518,353 registered deaths included 266,102 of males and 252,251 of females. The death-rate of males was 18·8, and that of females 16·9 per 1000 living of the corresponding sex, showing declines respectively of 8·3 and of 7·7 per cent. from the average rates in the preceding ten years.

Out of equal numbers living there were 1113 deaths of males to 1000 deaths of females, a difference somewhat below that of the previous decennial average, which gave 1119 male to 1000 female deaths.

Ages at Death.—In Tables 11–13 are given the death-rates at different ages for each sex; and it will be there seen that at every age-period from 5 to 45 years the rate both for males and for females was the lowest on record in the past half-century, though this was not the case for the remaining age-periods, namely, among children under five and persons over 45 years of age; yet even at these ages the rates were considerably below the averages of recent years. As has been pointed out in previous reports, the diminution of mortality, attributable to sanitary measures, has been much more marked in the earlier stages of life than among older persons.

The proportion of deaths of infants in the first year of life to registered births, or the infantile mortality, was 144 to 1000, and slightly above the previous decennial average which had been 141 to 1000.

Of the total 127,198 deaths of infants, 61,202 were in the first three months, 26,024 in the second three months, and the remaining 39,972 in the last six months of the first year of life. These figures, taken in connection with the registered births, give annual death-rates of 286 per thousand living under three months of age, 128 per thousand under six but over three months, and of 103 per thousand for infants between six months and a year. These rates are slightly higher than those obtained from the births and deaths in the total nine years of the current decennium 1881–89), which show respectively 282, 123, and 101 per thousand living at each age.

The infantile mortality varies enormously in different counties; being, as might be anticipated, highest in those in which the population is in large proportion urban and industrial. Of these, Lancashire and Leicestershire may be taken as examples, these being the two counties in which the infantile death-rate was highest both in 1889 and in the decennial period 1879–88; and with these may be contrasted the mainly rural counties in the South-Eastern and the South-Western Divisions (Table 10). The annual mortality in 1889 in these several areas for infants in the several subdivisions of the first year of life was as shown in the following Table:—

TABLE B.—ANNUAL DEATHS per thousand living at each Age, 1889.

Area.	0–3 Months.	3–6 Months.	6–12 Months.
England and Wales - -	286	128	103

South-Eastern Division -	227	89	68
South-Western Division -	233	90	76

From these figures it would appear that while the conditions of life in the manufacturing counties are highly unfavourable to infants at all periods in their first year, the destructive influences are much more intensely active after the first three months are past than in that earlier period; for while the rates in the two manufacturing counties, as shown in the table, are only about 50 per cent. higher than the rates in the two rural divisions for infants under three months of age, they are from 80 to 100 per cent. higher for infants between three and six months. It may, however, not impossibly be that the smaller difference in the rates of the first three months is in part due to the practice of dealing with infants who have been born alive, but have died almost immediately after birth, as though

they had been still-born, being more common in towns than in rural districts.

Among the deaths were 76 of reputed centenarians, 21 being men and 55 being women.

Urban and Rural mortality.—It has been shown that the death-rate for England and Wales rose slightly in 1889 above the rate of the preceding year. This rise was entirely brought about by an increased mortality in the Urban Districts, in which the rate rose from 18·4 to 18·6, while in the Rural Districts there was a slight decline, the rate falling from 16·7 to 16·5 (Table 24). Out of equal numbers living there were 113 deaths in the urban population to 100 in the rural population.

Registered Causes of Death.

The assigned causes of death were distributed as follows in the several classes :—

Table C.—Mortality from the several Classes of Diseases.

Causes of Death.	Total Deaths 1889.	Rate per Million living.

Zymotic or Specific Febrile Diseases.—The deaths ascribed to this class of specially preventable diseases numbered 69,776, and were in the proportion of 2405 to a million persons living. This rate, though considerably above the excessively low rate of the immediately preceding year, was lower than that of any other year in the current decennium, and no less than 35 per cent. below the mean of the 10 years 1871–80. The excess in 1889, as compared with the immediately preceding year, was due to the greater mortality under two headings, namely, measles and diarrhœa, the latter of which had been in 1888 at its minimum and the former exceptionally low.

The deaths from *small-pox* amounted to the unprecedentedly low number of 23, and were less than one-tenth of the smallest number recorded in any previous year. There were, however, 83 deaths ascribed to chicken-pox, and it is very probable that most of these were in reality cases of modified small-pox, true chicken-pox being an ailment that is rarely, if ever, fatal.

The deaths from *measles* numbered 14,732, and were in the proportion of 508 to a million living. This rate, though lower than that of 1885 or 1887, was higher than that recorded in any other year since 1874. It is noteworthy that while the mortality from most diseases has in late years shown a large decrease, the mortality from measles has on the other hand in three of the past five years, viz. :—1885, 1887, 1889, been in great excess. It was in London and in the counties of the Northern, the York, and the

North-western Divisions that the mortality under this heading was highest, namely, in Cheshire, Lancashire, the West and East Ridings, Durham, and Cumberland (Table 23); but the rate was also in excess in Oxfordshire, Herefordshire, and Staffordshire.

The deaths from *scarlet-fever* numbered 6698, and were in the proportion of 231 to a million living, the remarkable falling off in recent years in the mortality from this disease having thus been fully maintained. In no one of the last five years, 1885–89, did the scarlet-fever rate reach 300 per million, the average for the quinquennium being only 235, whereas in no previous year since 1855, when the mortality from this disease was first separately calculated, had the rate ever fallen so low as 400 per million, save in 1884, when it just reached that point. (Table 18.) Speaking generally, the highest rates under this heading were, as usual, in the counties of the North Midland, North Western, York, and Northern Divisions, and in South Wales (Table 23); but the mortality was also high in some of the more southern counties, and notably in Devonshire, where it reached 633 per million, mainly owing to a serious outbreak in Plymouth, in which borough the rate was no less than 3399 per million.

The deaths ascribed to *typhus* were only 137, and absolutely, as well as relatively to the population, fewer than in any preceding year in our records. The same was true of the deaths from *simple and ill-defined forms of fever*, which numbered 413.

The deaths ascribed to *diphtheria* numbered 5368, or 185 to a million living. The rate was also 185 in 1884, but with this exception there is no year since 1865 with so high a recorded mortality from this disease. (Table 18.) It was, as usual, in the South Eastern parts of England that this disease was most fatal; for of the eight registration counties in which the rate was above the average for the whole country, no less than six were in what has been designated in previous reports as the South Eastern diphtheritic region, these six being London, Kent (extra-metropolitan), Middlesex (extra-metropolitan), Essex, Sussex, and Berkshire, while of the counties in the Western diphtheritic region the only one with excessive mortality was, as had also been the case in 1888, Monmouthshire; the remaining and eighth county with a high rate being, again as in 1888, Lancashire. In considering the increase in the registered mortality from diphtheria, the remarks made in the last Annual Report (p. xxiv.) as to the vagueness with which this term is used, and the probable interchange between the headings Diphtheria and Croup, must not be forgotten. For while the deaths ascribed to diphtheria have increased, those ascribed to croup have diminished, though not in equal degree.

To *whooping-cough* were attributed 12,225 deaths, or 421 per million living, which was considerably below the average rate in the preceding decennium, which had been 461 (Table 23). This doubtlessly stands in connection with the decline in the mortality from diseases of the respiratory system, which, as will be presently seen, was almost at the lowest point yet recorded.

On the other hand the deaths from *enteric fever*, 5011 in number, or 173 to a million living, were, relatively to the population, somewhat more numerous than they had been in 1888, and equal to what they had been in 1885. Disregarding, however, these casual fluctuations, the fact remains that the rates in the past five years, 1885–89, were the five lowest rates in our records, and that the average in that quinquennium was only 176, though the lowest rate recorded in any one previous year had been 212 per million.

Taking the three headings under which continued fevers are tabulated together, the aggregate rate was below 100 per million in Berkshire, Hertfordshire, Wiltshire, Herefordshire, Rutlandshire, and Westmorland, all of which are rural counties, while it varied from 203 up to 308 per million in

Huntingdonshire, Norfolk, Dorsetshire, Leicestershhire, Nottinghamshire, Cheshire, Lancashire, West and East Ridings, Durham, Northumberland, and South Wales, most of which contain a large proportion of mining or manufacturing population.

The deaths from *diarrhœa*, including *dysentery*, numbered 18,434, and were in the proportion of 635 to a million living. This rate was very considerably above that of the immediately preceding year, which was the lowest recorded for forty years, but was below the average of the preceding decennium, which had been 694. The mortality did not exceed 282 per million in Surrey (extra-metropolitan), Huntingdonshire, Wiltshire, Dorsetshire, Herefordshire, Rutlandshire, Westmorland, and North Wales, while it varied from 909 to 1025 per million in Warwickshire, Leicestershire, Lancashire, East Riding, and Durham (Table 20).

Puerperal Fever.—The deaths attributed to this cause were 1852, and, adding to these 1733 deaths from the other accidents of childbirth, we have a total of 3585 deaths directly ascribed to parturition. This was in the proportion of 4·05 deaths to 1000 registered births, a rate considerably below the previous decennial average, which had been 4·62. (Table 23.)

The mortality from *puerperal fever* stands in close relation with the mortality from *erysipelas*, the two showing a great tendency to rise or fall together, as will be seen if the figures for a succession of years, as given in Table 15, be carefully examined. In 1889 the deaths ascribed to puerperal fever were fewer than in any earlier year of the current decennium, and the same was the case with the deaths from erysipelas, which only amounted to 1209, whereas the average for the preceding eight years 1881–8 had been 2008. The correspondence in rise and fall between the mortality from puerperal fever and the mortality from erysipelas is closer when the deaths from this latter in the first three months of life are alone taken than when the mortality at all ages is the basis of comparison, from which it may be inferred with much probability that the same poisonous agency which affects young infants and produces erysipelas, possibly by way of the unhealed umbilical cord, also affects the recently delivered mother and results in puerperal fever.

Hydrophobia.—The deaths from this disease numbered 30, and exceeded the registered number in any one of the five next preceding years, with the exception of 1885, when no less than 60 deaths were thus caused. (Table 15.) It was pointed out in the last Annual Report that the returns for the twenty years 1869–88 lead to the conclusion that there are in this country two centres of hydrophobia in man and of rabies in animals, one of which is Lancashire, with radiation into Cheshire and the West Riding, while the other is London, with radiation into the surrounding belt of counties (Fifty-first Annual Report, pp. xiii–xv). The distribution of the deaths in 1889 harmonises with that conclusion, for of the total 30 no less than 15 were registered in Lancashire, West Riding, and Cheshire, while 7 were registered in London itself, and 5 more in the counties into which the disease was described as radiating from the metropolis, namely, 1 in Middlesex (extra-metropolitan), and 2 each in Berkshire and Hampshire. Thus 27 out of the 30 deaths occurred in one or other of the two usual areas, leaving only 3 in the rest of England, namely 1 each in Northamptonshire, Shropshire, and Worcestershire.

Parasitic Diseases.—The great bulk of the deaths in this class are deaths of infants ascribed to "thrush." Gradually the use of this inadequate term as a cause of death has diminished, and consequently there has been a decline in the registered mortality from these diseases. The mortality in 1889 was the same as it had been in 1888, and these two years are those in which it was at its lowest.

Dietetic Diseases.—The main heading in this class is intemperance. To this cause 1566 deaths, 998 being of men and 568 of women, were attributed; a number higher both actually and relatively to the population than in any previous year in our records. (Tables 15 and 16.) Possibly this fact stands in connection with the great and unexpected increase that was shown by the Chancellor of the Exchequer to have occurred in the consumption of spirits in 1889. In addition to the deaths directly ascribed to intemperance, there were 190 others among the deaths from accident in which it was stated that the deceased was drunk when the accident occurred (pp. 196, 199).

Constitutional Diseases.—The deaths in this class numbered 91,667, being in the proportion of 3158 to a million persons living; a rate scarcely different from those of the two next preceding years, but considerably lower than the previous average.

There was a considerable falling off in the mortality from *rheumatic fever*, which was at the lowest point yet reached; and though the mortality from *phthisis* was not lower in proportion to the population than it had been in the immediately preceding year 1888, it was with this exception at its minimum. The mortality from *diabetes* has long been increasing year by year, but in 1889 there was a slight decline, the rate falling from 62 per million in the two years 1887 and 1888 to 60. It was still, however, higher than in any earlier year with these two exceptions.

The deaths ascribed to cancer, using that term as a general designation for all malignant new growths, were 18,654 and in the proportion of 643 to a million persons living; showing a further increase upon the ever growing rates previously recorded. (Table 16.) Some of this increase is most certainly attributable to increased accuracy in statement of cause, and to the system introduced some years back into this office of writing for further information in cases where some vague cause, such as "tumour," has been given as the cause of death in the original certificate; a system which added, for instance, in the year 1889 no less than 421 deaths to the heading Cancer. Nevertheless, in face of the constant and great growth of mortality under this heading, and the expressed belief of medical practitioners specially engaged in dealing with this class of diseases that they are really becoming more and more common, it seems scarcely possible to maintain the optimistic view that the whole of the apparent increase can be thus explained; and it must be admitted, as at any rate highly probable, that a real increase is taking place in the frequency of these malignant affections.

To what causes such increase may be due is a question outside a purely statistical report; but it may be pointed out that if it be true, as appears to be the general though not the universal opinion of medical experts, that the development of new growths is often due to a constitutional and inheritable tendency, and if, as undoubtedly is the case, such development does not as a rule manifest itself till after the usual age of marriage and of parturition, it must follow as a necessary arithmetical consequence that the tendency shall spread wider and wider among the population. In the case of a disease such as tubercular phthisis, which in a large proportion of cases manifests itself before the age of marriage, there will be at any rate to a certain extent a constant, if an insufficient, weeding out from the candidates for matrimony of those who are most seriously liable to this disease; but in the case of cancer there will be no such preservative influence, and so long as persons with this inherited tendency marry practically without let or hindrance of any kind, there must, as already said, be a constantly growing proportion of the population that shares in the constitutional defect.

Whether it be really the case that the tendency to neoplastic growths is inheritable is a question on which it is not intended here to enter, our

death-registers not furnishing the requisite data for its examination; but it may be pointed out that neither a very considerable proportion of cases with a family history of similar disease, nor even a considerable proportion of cases with a history of such affliction among the direct progenitors, is of itself sufficient evidence of inheritance. For seeing that one out of 21 males, and one out of 12 women, who reach the age of 35, die eventually of cancerous disease, it follows by the law of probabilities that on an average in one of three cases either a parent or a grand-parent will have died of such an affection, supposing such parents and grand-parents to have died after 35 years of age; and the proportion will be still higher if the circle of relatives be extended so as to include not only these direct progenitors but collateral relatives such as uncles and aunts. For supposing a person to have had besides his six parents and grand-parents only four such collateral relatives, say two uncles and two aunts, it will be an even chance that one or more of these ten persons, half of each sex, will have died of malignant new growth, supposing as before that they have died after their 35th year.*

It is true that the rates from which these arithmetical conclusions are drawn are the rates for the three years 1886–7–8, and that as the proportion of deaths from cancer to deaths from all causes has been constantly increasing, the chances of succumbing to it were not quite so great for our parents and grand-parents as for the present generation; and some deduction would in strictness have to be made on this account. Still it is manifest that, after all due allowance for this, the proportion of cases with a family history of cancer would have to be very high indeed before such proportion could be properly quoted as evidence of inheritance.

In view of the apparent, and probably in part real, increase of malignant new growths, it is desirable to ascertain what light can be thrown by our death registers upon the question whether such increase has been shared equally by both sexes, and by all ages, and all parts of the body.

As regards sex, it has been noted in previous reports (*see* 47th Report, p. xviii.) that the increase has been much greater among males than among females. Thus, in 1851–60, the annual registered mortality from cancer was 195 per million living for males and 434 per million for females; but in 1871–80 the rates had risen respectively to 315 and 622 per million, a rise of 62 per cent. in the male rate, but of only 43 per cent. in the female rate.

As regards age, the following figures for the same two decennia show that the increase has been by no means equally distributed over all the

* On the basis of the figures for 1887–8–9, the chance that a man who reaches the age 35 will eventually die of cancer is 1 in 21, and the chance that a woman who reaches the same age will eventually die of cancer is 1 in 12. Taking these proportions, excluding all persons who die before the end of their 35th year, and assuming no heredity, the following table shows how often no death, or one, two, three, &c. deaths from cancer may be expected to occur in 100 families, half the members of which are men and half women:—

Number of Cancer Deaths in Family.	Per 100 Families.		
	Of Six Members, viz.:— 3 Men, 3 Women.	Of Eight Members, viz.:— 4 Men, 4 Women.	Of Ten Members, viz.:— 5 Men, 5 Women.
None	67	58	51
One	28	33	36
Two	5	8	11
Three or more		1	2
	100	100	100

periods of life, but has been greater and greater, with much regularity, the more advanced the age. Thus, among children under 15, the rates show a decline; from 15 to 25 they remain stationary; and then increase progressively with each successive advance of age.

TABLE D.—MEAN ANNUAL MORTALITY from CANCER per MILLION PERSONS LIVING at successive AGE-PERIODS in 1851–60 and in 1871–80.

It remains to consider whether the increased mortality from malignant growths has been shared by all parts of the body. Unfortunately the statements of cause in the death certificates given by medical men are, in a large proportion of cases, inadequate to furnish a secure foundation for trustworthy statistical conclusions; and it is probable that the records of hospitals specially concerned with malignant growths, if scantier in amount than our official death-registers, would make up for such quantitative inferiority by their better quality, and would furnish a more satisfactory basis for scientific inquiry. In a large proportion of deaths ascribed to malignant disease, the part of the body which was the seat of the new growth is not stated in the certificate; often, when it is stated, it is stated in such general terms as to be useless for pathological classification, and rarely, if ever, is the information given whether the organ was the primary seat of the disease, or only secondarily affected. Under these circumstances it would be a waste of labour and of money to abstract year by year, as has been proposed, the deaths from these diseases by the parts of the body in which they were located; and the most that can be done, with reasonable consideration of cost, is from time to time to take out a sufficiently large sample of those cases in which the seat of disease is more or less clearly specified; and, assuming that such samples fairly represent the bulk, to divide out the total cancer mortality in proportions derived from them. That is the method by which the figures in the following table (Table E.) have been obtained. The sample extracted from the registers of 1868 consisted of 3164 deaths, 1018 being of males and 2146 being of females; while the sample for 1888 consisted of 7931 deaths, namely 2854 of males and 5077 of females. The parts stated to have been affected have been grouped so far as the imperfect description allowed, in some cases the most probable place of classification being adopted; but in many cases even probability fails as a guide, and such parts have not been classified at all. (*See page* xvi.)

The figures show in the first place, that, though cancers or new growths are vastly more common among women than among men, yet this excess is entirely due to the great liability of the female generative organs and breast to be thus affected, and that when these organs, and those which are especially likely to be secondarily affected from them, or, in the absence of a post-mortem examination, to be confounded with them, are excluded, the excess is invariably on the side of the male sex.

The organs other than generative or mammary in which the female rate exceeds the male are the axilla and the ribs and sternum, probably secondarily affected from the breast; the liver and peritoneum, probably secondarily affected from the uterus or ovaries; the intestines (not rectum) and the parts vaguely described as abdominal, probably either secondarily

* A dash in these four columns means that no death was registered; a cypher that deaths *occurred, but less* than one in 1,000.

affected from the generative organs or confounded with them; after which are left, even in this minutely divided list, only such trivial exceptions as the brain, the pancreas, the groin, the spleen, the heart, the thyroid, showing each in very small, and therefore not very trustworthy, figures, an excess on the female side. It is, however, noteworthy that small as the figures are, under most of these exceptional headings the female rate was in excess both in 1868 and 1888. Such was the case with the thyroid, the brain, the groin, and the heart. Disregarding such exceptions, under all the other headings the male exceeds the female mortality; but the parts in which such excess is most notable are the lip, the mouth, and the tongue; for, putting these three together, the male mortality in 1888 was 134, while the female mortality was only 20, per million living over 35 years of age, the male rate being thus nearly seven times greater than the female. The rates, it should be observed, have been calculated only for persons 35 years of age or upwards, the object being to equalise in some degree the age-distribution of the two sexes, and so give greater trustworthiness to comparison of their respective mortalities.

As regards the parts of the body which have suffered from the increase in the registered amount of malignant disease, it would appear from the figures in the table that, with exceptions so trivial that they may be disregarded, the increase has been shared by all parts, though by no means in equal proportions. When the rate of mortality from disease in any specified organ is very small, no great importance can of course be attached to the amount of its apparent increase or decrease, for the addition of one or two cases to the total deaths might double the calculated mortality. We must, therefore, in considering the individual organs, limit ourselves to those in which malignant new growths are of tolerably frequent occurrence, let us say those which gave a mortality in 1868 of not less than 15 per million. There were 12 such for males, and under every one of these, with the single exception of the face, there was a notable increase, varying from 20 to 200 per cent. Among women there were 11 organs that gave severally in 1868 mortalities of more than 15 per million; of these, eight showed more or less increase in 1888, while in three there was a decrease.

The following are the exact increases or decreases per cent. for each of these organs, in each sex, the figures being put in brackets when the rates did not reach 15 per million in 1868 in one or the other sex:—

Parts affected.	Men.	Women.
Arms, Legs, Hands, Feet	+ 73	− 13
Mouth	+ 55	(− 26)
Tongue	+ 67	− 29
Pharynx, Fauces, Tonsils, Throat	+ 44	− 9
Stomach, Pylorus	+ 22	+ 44
Intestines	+198	+273
Rectum	+102	+ 87
Liver, Gall Bladder	+124	+187
Bladder, Urethra	+171	(+ 98)
Penis, Testes, Scrotum	+ 52	—
Breast	(+ 94)	+ 9
Uterus, Ovary, &c.	—	+ 19
Lip	+ 58	(+204)
Face	− 6	+ 10
Abdomen (not more closely specified)	+236	+142

It thus appears that the increase has been comparatively slight in those organs which are the commonest seats of malignant growths, namely, the generative and mammary organs of women, and has been largest, and this

for both sexes, in the organs of the digestive and the urinary systems, and notably in the intestines, rectum, liver, and urinary bladder. Among men there has also been a large increase in disease of what may be called the upper organs of the digestive system, namely, the mouth, the tongue, the pharynx and the fauces, while among women there has been no such increase, but on the contrary a falling off.

Developmental Diseases.—The deaths attributed to *old age* have for some years been declining in number, doubtlessly in consequence of the more precise designation of the causes of death of old persons; this decline continued in 1889, and the registered mortality under this heading was at its minimum. On the other hand, the deaths ascribed to *premature birth*, which, as has been several times pointed out in previous reports, have been for a long series of years becoming more and more numerous in proportion to the registered births, showed a further increase in 1889, having risen progressively from 11·19 per 1000 births in 1861–5 to 16·29 in 1889.

Local Diseases.—The 267,243 deaths included in this heterogeneous class were fewer in proportion to the population than in any previous year of the current decennium or than the average in the preceding decennium. The mortality from *diseases both of the nervous system and of the respiratory organs* was lower than in any year since 1872; the mortality from *diseases of the urinary system*, though still high, was slightly below that of any one of the last six years; while the mortality from *diseases of the liver* was at its minimum.

Violence.—The deaths ascribed to some or other form of violence numbered 17,497, and were in the proportion of 603 to a million living. The mortality from *accident*, as also the mortality from *homicide*, was almost identical with that of 1888, but lower than in any earlier year. The death-rate from *suicide* also, which had been abnormally high in each of the three years 1886–7–8, fell considerably in 1889. There were still, however, 2170 persons, namely, 1626 men and 544 women, who were found on inquest to have destroyed themselves. Twelve men were executed during the year, while 172 persons were found to have been murdered. Of these 172 persons, 74 were infants under one year of age, 61 of these being in the first month of life.

Ill-defined and Not-specified Causes.—The deaths for which either no cause was assigned, or in which the cause was too ill-defined for classification, numbered 25,466, or 4·9 per cent. of all the deaths registered; the proportion had been the same in the immediately preceding year, 1888. These unsatisfactorily-described deaths would have been still more numerous had not 3175 letters of inquiry concerning doubtful cases been sent to medical men; the result of which was to add materially to the numbers under some special headings. For instance, 405 deaths were by this process removed from the vague heading Tumour to Cancer or Malignant Disease; 146 to Uterine or Ovarian Disease, and 41 to Syphilis.

Certification of the Causes of Death.—Of the 518,353 deaths registered during the year 1889, the causes of 474,174, or of 91·5 per cent., were certified by registered medical practitioners; and the causes of 29,079, or of 5·6 per cent. were certified by coroners after inquest. The causes of the remaining 15,100 deaths, or of 2·9 per cent., were not certified, this per-centage showing a further step in the decline in the proportion of uncertified deaths which has been manifested in recent years. It must not be supposed that all these 15,100 deaths were of persons unattended in their last illnesses by medical men. For many of them—especially in mining

districts—would have been attended by unregistered medical practitioners, acting as assistants to registered practitioners or otherwise; and a further considerable number would be of children who died very shortly after birth, and for the few hours of their life were in the care of registered midwives. The proportions of uncertified deaths in 1889 varied much as in other years in different counties; the lowest proportions per cent. in English counties being 0·7 in Middlesex (extra-metropolitan), 0·9 in Wiltshire, 1·1 in London and in Monmouthshire; while the highest were 4·1 in Kent (extra-metropolitan) and in Derbyshire, 4·3 in Bedfordshire, 4·4 in Westmorland, 4·5 in Durham, 4·7 in Herefordshire, and 5·6 in Huntingdonshire. In Wales the per-centage was 5·9, being 7·2 in North Wales, and 5·4 in South Wales.

Offences against the Registration Act.—The Registrar-General has found himself compelled in the course of the year to sanction the institution of twenty-two prosecutions for offences against the Registration Act. In each case a conviction was obtained, and a fine inflicted. The offences were of several kinds; in some instances medical men had falsely certified that they had been in attendance upon the deceased persons; in others midwives had falsely certified to stillbirth in the case of live-born infants; in others false addresses had been given in order to evade the vaccination officer; while in the remaining cases, illegitimate children had been registered as born in wedlock.

Progress of Registration.

The names in the alphabetical indexes of births, deaths, and marriages recorded in the national register of England and Wales were increased in the year 1889 by 1,832,027, this addition raising the aggregate number of names in the indexes, which at the end of 1889 embraced a period of 52½ years, to 79,386,263. The number of searches in 1889 in the various registers was 41,002, exceeding the number in the previous year by 525. The number of certificates issued was 30,491, showing an increase of 438 on the number in 1888. The fees received for searches and for certificates in 1889 and paid into Her Majesty's Exchequer amounted to 5,884*l.* 2*s.* 6*d.*, and exceeded the amount received in the previous year by 76*l.* 2*s.* (Table 26.)

A list of the various public registers and records lodged in the General Register Office, Somerset House, was published in the 34th Annual Report, pp. xxi–xxii and xxv–xxvi.

Mortality in the Army.*

The average strength of the Army, at home and abroad, in 1889, was 210,298, and the deaths were 1961, the rate of mortality thus being 9·3 per 1000, against 9·6 and 9·7 respectively in the preceding two years. The mortality in the army abroad was 13·8 per 1000, the mean rate in the preceding five years having been 15·4; while the rate in the Army at home was only 5·0, and 1·6 per 1000 below the average rate in the preceding five years, such mean rate itself having shown a considerable decline from the mean rates in previous quinquennia. (Table 29.)

* Based upon returns furnished by His Royal Highness the Commander-in-Chief.

Mortality in the Navy.*

The average force afloat in 1889 was 50,790. The deaths were 271, being in the ratio of 5·33 per 1000 of the strength. Of the 271 deaths, 197 were due to disease, and 74 (including 7 from heat-stroke) to violence; so that the death-rate from disease was 3·87 and from violence 1·46 per 1000.

Of the 74 deaths from violence, 33 resulted from accidental drowning, 38 from other accidental causes, and 3 from suicide.

Births and Deaths of British Subjects at Sea.

Marine Register Book.—In accordance with the Births and Deaths Registration Act of 1874, commanding officers of British ships, whether in Her Majesty's service or not, are required, under a penalty, to transmit returns of all births and deaths occurring on board their ships to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrars-General of England, Scotland, and Ireland. These certified copies of entries of births and deaths at sea constitute the "Marine Register Book." To this Register were added 189 entries of births and 3154 of deaths during the year 1889. Of these 3154 deaths, 1545 were of persons of English origin, while 255 were of persons of British origin, so far as could be judged from the entries, which are not always very precise.

Among *passengers* on board merchant vessels at sea (Table 32), 128 births and 484 deaths were reported in 1889, these numbers differing but slightly from those recorded in the preceding year.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports that the number of masters and seamen afloat in registered vessels belonging to the mercantile marine of the United Kingdom, including the islands in the British Seas, during the year 1889 was 230,263, showing an increase of 6590 upon the number in the preceding year. The reported deaths among masters and seamen during 1889 numbered 3018, corresponding to an annual rate of 13·1 per 1000 of the strength; this was 0·8 per 1000 lower than the rate in the previous year, and was also the lowest rate yet recorded.

International Vital Statistics.

In Tables 39–56 will be found international vital statistics relating to most of the principal European States, including the United Kingdom. Table 39 affords the means for comparing the marriage, birth, and death rates in each State for a series of years with the average rates during the period 1861–80. It must, however, be remembered that great caution is necessary in making comparisons between the rates in any one country with the rates in another; inasmuch as there are great differences between countries in the age-distribution of their inhabitants; and it is evident that the marriage, the birth, and the death rates depend largely on this age-distribution.

The *marriage-rate* in 1889 rose not only in England, in Scotland, and in Ireland, but also in Germany, Belgium, the Netherlands, and Norway, whilst in Denmark and in Switzerland it remained stationary, and in Austria, France, and in Italy it declined.

---

* Based upon returns furnished by the Director-General of the Medical Department of the Navy.

The *birth-rate* declined not only in the several divisions of the United Kingdom, but in all the other European States from which figures have been received, with the exceptions of Belgium, Italy, and Austria, in the last-named of which it remained stationary.

The *death-rate*, which rose slightly in England and in Scotland, declined in Ireland, but remained stationary in the aggregate of the United Kingdom. The same was the case in the German Empire. In Norway, and in Switzerland, it rose; but declined in Denmark, Austria, the Netherlands, Belgium, France, and Italy.

I have the honour to be,

Sir,

Your faithful Servant,

BRYDGES P. HENNIKER,

General Register Office, Somerset House, *Registrar-General.*

29th November 1890.

Remarks on the Meteorology of the Year 1889.*

By James Glaisher, Esq. F.R.S., &c.

The following remarks, both with regard to atmospheric pressure and temperature, are based on the observations made near London, but they may be taken as having a general application.

Atmospheric Pressure.—The readings of the barometer were generally above their averages till the 28th of January, being particularly so from the 2nd to the 4th and from the 22nd to the 28th, when they were a little more than half an inch above their averages, the mean daily excess for these 28 days being 0·28 in.; from January 29th to March 21st it was generally below, being particularly so on March 20th when it was more than an inch below its average, and on several other days was as much as three-quarters of an inch below; the mean daily deficiency for the 56 days ending March 21st being 0·11 in.; from March 22nd to the 31st it was above, the mean daily excess being 0·21 in., from April 1st to June 15th it was generally below, the mean daily deficiency for these 76 days being 0·11 in.; from June 16th to July 6th it was above, the mean daily excess being 0·15 in., from July 7th to August 25th it was generally below, the mean daily deficiency for the 50 days being 0·13 in.; from August 26th to September 18th it was above, the mean daily excess being 0·13 in.; from September 19th to November 5th it was below, being on several days more than half an inch, the mean daily deficiency for the 48 days being 0·17 in.; and from November 6th to December 31st it was generally above, being particularly so from the 17th to the 20th of November, when it was a little more than three-quarters of an inch above, the mean daily excess for the 56 days being 0·56 in.

The highest reading of the barometer at the height of 150 feet above the sea was 30·55 ins. on January 3rd, and the lowest was 28·80 ins. on March 20th; the yearly range was 1·75 ins.

Temperature.—The temperature of the air was below its average till January 8th, being particularly so on the 5th, 6th, and 7th days, when it was 9°·4, 13°·9, and 9°·2 respectively below, the mean daily deficiency for the eight days being 7°·3; from January 9th to February 1st it was generally above, being particularly so on February 1st, when it was 12° above its average; the mean daily excess for the 24 days being 1°·0; from February 2nd to May 2nd it was generally below, being particularly so from the 10th to the 13th, and 26th of February to March 5th, when it was from 9° to 13° below its average, the mean daily deficiency for the 90 days being 2°·8; from May 3rd to July 13th it was generally above, being particularly so from the 22nd to the 25th of May, and on June 14th, the mean daily excess for the 72 days being 1°·9; from July 14th to November 2nd it was generally below, being particularly so on the 21st, 22nd, and 25th of September, the mean daily deficiency for the 111 days being 2°·3; from November 3rd to the 25th it was above, the mean daily excess being 2°·9; and from November 26th to December 31st it was generally below, being particularly so from November 27th to December 8th, and on the 12th and 29th of December, the mean daily deficiency for the 36 days being 4°·2.

The highest temperatures of the air were 87°·0 at Cambridge, 86°·6 at Royal Observatory, and 86°·0 at Osborne, Salisbury, and Blackheath; and the lowest were 12°·2 at Somerleyton, 12°·5 at Cambridge, and 12°·7 at Barnet.

Rainfall.—The fall of rain was below its average in January; above in February; and below its average again in March. The total fall in

* For Meteorological Tables, *see* pp. lviii–lxiii.

the three months at Greenwich was 4·36 ins., being 0·62 in. below the average. The falls of rain were above their averages in April, May, and June. The total for the three months at Greenwich was 7·22 ins., being 1·44 in. above the average. The falls of rain were below their averages for July, August, and September. The total fall for the three months at Greenwich was 5·56 ins., being 1·76 in. below the average. The fall of rain was above its average in October; and below in November and December. The total fall for the three months at Greenwich was 6·15 ins., being 0·95 in. below the average. The fall of rain for the year was 23·29 ins., being 1·91 ins. below the average; and the number of days on which it fell was 158.

The heaviest falls of rain at our stations in the year were at Stonyhurst 42·50 ins., at Truro 37·38 ins., and at Bath 36·62 ins.

The least falls were at Leeds 20·98 ins., at Whitchurch 21·95 ins., and at Bradford 22·59 ins.

The greatest numbers of days of rain were 216 at Guernsey, 211 at Truro, and 205 at Stonyhurst; and the least were 145 at Barnet, 146 at Wolverhampton, and 147 at Blackheath.

Thunderstorms occurred on 68 days at the different stations during the year; of these, 13 were in May, 10 in July, 9 in each of the months of April, August, and October, 7 in June, 6 in September, 3 in November, and 1 in both February and December, and none were reported in January or March.

Thunder was heard but lightning was not seen on 67 days during the year; of these, 14 were in May, 12 in April, 10 in both July and August, 6 in October, 5 in June, 3 in September, 2 in each of the months of February, March, and November, and 1 in January.

Lightning was seen but thunder was not heard on 39 days during the year; of these, 8 were in September, 7 in October, 6 in May, 4 in both February and July, 3 in each of the months of August, November, and December, and 1 in June.

Solar halos were seen on 70 days during the year; of these, 10 were in both March and August, 9 in September, 7 in both October and November, 6 in both May and December, 4 in April, 3 in each of the months of February, June, and July, and 2 in January.

Lunar halos were seen on 35 days during the year; of these, 6 were in both February and March, 5 in both January and December, 3 in each of the months of September, October, and November, 2 in May, and 1 in both April and August.

Aurora Borealis was seen on 1 day during the year, viz., on November 26th at Halifax.

Snow fell on 69 days during the year; of these, 24 were in February, 15 in March, 14 in December, 7 in April, 4 in January, 3 in November, and 2 in October; the last fall in the spring was on April 14th at Royston; none fell in May, June, July, August, or September; and the first fall in the autumn was on the 26th of October at Plymouth.

Hail fell on 83 days during the year; of these, 18 were in February, 12 in April, 10 in March, 8 in both October and December, 7 in May, 6 in November, 4 in July, 3 in each of the months of January, August, and September, and 1 in June.

Fog prevailed on 189 days during the year; of these, 26 were in December, 22 in both January and October, 21 in November, 17 in September, 16 in both May and June, 14 in March, 12 in April, 10 in July, 7 in August, and 6 in February.

PRELIMINARY TABLES.

TABLE 2.—**United Kingdom: Population of its several portions estimated to the the British Seas, and of the portions of the Army.**

Year.	United Kingdom. Area 77,142,[illegible] Acres.			England and Wales. Area 37,239,431 Acres.		
	Persons.	Males.	Females.	Persons.	Males.	Females.

* The populations used are deduced from the rates of increase observed in the 40 years 1841–81 (*see* Table 1), and are distributed in the several groups of ages according to the proportions found to prevail at the last five Censuses.

* Deaths from this cause prior to 1881 were classed, partly with "Diseases of Respiratory System" and partly with "Ill-defined and not specified Causes."
† Deaths from these diseases prior to 1881 were classed with "Other Tubercular and Scrofulous Diseases."

Table 16.—ENGLAND.—Annual Death-rates, from Various Causes, to a Million Persons living, 1865–89.

(Decimals are omitted, the nearest whole number being taken. When the Deaths from any Cause were too few to give a rate of 0·5, a cipher is inserted.)

Cause of Death.	1865.	1866.	1867.	1868.	1869.	1870.	1871.	1872.	1873.	1874.	1875.	1876.	1877.	1878.	1879.	1880.	1881.	1882.	1883.	1884.	1885.	1886.	1887.	1888.	1889.

NOTE.—*Up to and including* 1866 masters were excluded from the above employment and mortality figures; the latter of which contained some cases of men who died in colonial vessels and fishing vessels not registered under the Merchant Shipping Acts, whose crews are not included in the employment column.

Since 1866 masters are included in both columns, and the employment and mortality figures relate only to persons employed in registered vessels belonging to the United Kingdom, the Isle of Man, and Channel Islands.

* The prices of Consols for the years 1840–52 relate to the 12 months beginning 1st April; from 1853 onwards the prices relate to calendar years. For the years 1840–88 the prices relate to stock bearing 3 per cent. interest, for 1889 to stock bearing 2¾ per cent.

† From the Board of Trade Statistical Abstract.

‡ The prices of coal are derived from Parliamentary Returns furnished by the Registrar of the London Coal Market, by order of the House of Commons.

§ Derived from Returns, published by the Local Government Board, of the number of persons in receipt of Relief on the last day of each week.

INTERNATIONAL VITAL STATISTICS.

Table 39.—Persons Married, Births, and Deaths per 1000 of the Population, in the UNITED KINGDOM and in OTHER EUROPEAN STATES.

(Tabulated from returns furnished by the authorities of the various States.)

Year.	United Kingdom.	England and Wales.	Scotland.	Ireland.	Denmark.	Norway.	Sweden.	Austria.	Hungary.	Switzerland.	German Empire.	Prussia.	The Netherlands.	Belgium.	France.
	Persons married to 1000 living.

NOTE.—The figures in this table refer exclusively to the civil population.
* Census year.
† The excessive mortality in 1866 was due to cholera and the war.
‡ Cholera caused the deaths of 107,007 persons in 1873.

Note.—The population in the four years 1862-65 and in the years 1867-69 is estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census year. † Cholera prevailed in 1865-66, and war raged in 1870 and 1871.

NOTE.—Statistics for the 7 years 1871-77 were not issued owing to the disturbed state of the country. The decline in registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred in that year.

* Censuses were taken on 31st December 1860, 1866, and 1877.

NOTE.—The numbers for Rome were first included with those for the Kingdom of Italy in 1872. The population figures given for census years show the numbers enumerated on 31st December in each of those years; whereas for each of the other years the population is estimated to the middle of the year. The populations in inter-census years are somewhat over-estimated, no account having been taken of emigration.

* Census year.

TABLE 57.—ENGLAND. Changes in the Constitution of Registration Districts and Sub-districts during the Year 1889.

N.B.—(1.) The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*.
(2.) The Populations quoted are the Numbers enumerated at the Census of 1881.

No. of District.	NAME OF REGISTRATION DISTRICT.	Date of Change.	Nature of Change.
16	BETHNAL GREEN -	1889. 1 October -	The four sub-districts of *Hackney Road, Green, Church,* and *Town* were dissolved and the district re-arranged as follows, viz.:—*Bethnal Green North* sub-district consists of that portion of the parish situate north of Bethnal Green Road and west of Cambridge Road, including the north side of Bethnal Green Road (aggregate population 51,157); *Bethnal Green South* sub-district consists of that portion of the parish situate south of Bethnal Green Road and west of Cambridge Road, including the south side of Bethnal Green Road (aggregate population 34,339); and *Bethnal Green East* sub-district comprises both sides of Cambridge Road and all that portion of the parish to the east of it (aggregate population 41,405).
363	WILLITON - -	1 May -	The parish of West Quantoxhead (population 278) was transferred from the sub-district of *Stogumber* to that of *Williton*.
377	TENBURY - -	1 May -	The sub-districts of *Tenbury* and *Bockleton* were united under the name of *Tenbury* (population 7,588).
387	ASTON - - -	1 April -	That part of the parish of Aston forming the parliamentary borough of Aston Manor, which was formerly included in *Erdington* sub-district, was constituted a separate sub-district, and named *Aston Manor* (population 53,842).
431	NOTTINGHAM - -	1 April -	The sub-districts of *Lenton* and *Park* were united under the name of *Lenton* (population 25,483).
496	HALIFAX - -	1 April -	That part of the parish of Skircoat which is situated in Sowerby Bridge Local Board District (population 2,538), was transferred from the sub-district of *Halifax* to that of *Sowerby*.
593	LLANDOVERY - -	1 January -	The sub-districts of *Llansadwrn* and *Conwil Cayo* were united under the name of *Conwil Cayo* (population 3481).
595	LLANDOVERY - -	1 April -	The parishes of Llansadwrn and Llanwrda (aggregate population 1502) were separated from the sub-district of *Conwil Cayo* and constituted a separate sub-district under the name of *Llansadwrn*. The effect of this change is to restore the arrangement of the district existing prior to 1st January 1889 (*see* above).

Under the provisions of "The Divided Parishes and Poor Law Amendment Acts, 1876 and 1879," changes were made on the 24th March 1889 in the constitution of the following Districts, viz.:—MAIDSTONE (50), HOLLINGBOURN (51), EAST ASHFORD (55), BRIDGE (56), PETWORTH (80), MIDHURST (85), ISLE OF WIGHT (91*), WINCHESTER (101), ALRESFORD (105), BRADFIELD (118), READING (119), WOKINGHAM (120), WOODSTOCK (152), BANBURY (156), ORSETT (190*), BILLERICAY (191), CHELMSFORD (192*), MALDON (194*), LEXDEN (197*), BRAINTREE (199*), DUNMOW (200*), BASFORD (430), BINGHAM (434), BELPER (437), ASHBORNE (438), NORTHWICH (447), CONGLETON (448), CHORLTON (464), ASHTON-UNDER-LYNE (468), ROTHBURY (567*), BANGOR (628), and HOLYHEAD (630B).

* In these cases the limits of the sub-districts only are affected.

* The *Registration Counties* consist of groups of Registration Districts, which are generally co-extensive with the Poor *Law Unions. A District* which extends into two or more Geographical Counties is included entirely in that Registration *County in which the principal town of the District*, or the greater part of the population, is located. The boundaries of *the Registration Counties differ* therefore more or less from the boundaries of the Geographical Counties. For areas and *populations of the Registration Divisions* and Counties, see pages 64-67.

* The 632 *Registration Districts* (Paddington 1a and Holyhead 630b having been constituted Registration Districts since the numerical arrangement 1 to 630 was adopted on 1st January 1881) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to the local position, under the Registration Counties. The Registration Sub-districts (2128 in number at the end of the year 1888) are sub-divisions of Registration Districts, within which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates a Hospital or Infirmary; *L* a Lunatic Asylum; and repetitions of these letters show the number of such Institutions in each Registration sub-district.

† The Deaths in the principal Institutions in England in 1889 are given on pages 71-94.

DEATHS IN WORKHOUSES, HOSPITALS, AND PUBLIC LUNATIC ASYLUMS.

1889.

THE following Table shows the numbers of deaths (Persons, Males, and Females) registered during 1889 in the Workhouses, Hospitals, and Public Lunatic Asylums of England. These figures afford the means of correcting the mortality of districts and sub-districts in which these Institutions are situated. The Table includes 1786 Institutions; of which 737 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 959 Hospitals or Infirmaries; and 90 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients (held on that account to be public for the purposes of this Table) are also included. In these 1786 Institutions 58,238 deaths were registered during the year, or 11·2 per cent. of the total deaths in England and Wales, against 10·8 and 11·4 per cent. in the two preceding years; 34,307 occurred in Workhouses, 18,140 in Hospitals, and 5791 in Lunatic Asylums. The proportion to total deaths was 6·6 per cent. in Workhouses, 3·5 in Hospitals, and 1·1 in Lunatic Asylums. The proportion of deaths recorded in Workhouses, which had been 6·5 and 6·9 per cent. in 1887 and 1888, declined to 6·6 per cent. in 1889.

Information relating to the deaths recorded in many Private Lunatic Asylums, Private Asylums for Idiots and Imbeciles, and in a few other institutions, will be found in the notes to the following pages.

Deaths in Workhouses, Hospitals, and Public Lunatic Asylums, 1889.

* In this classification of Violent Deaths the totals of the sub-divisions Burns, Scalds, &c., Drowning, and Suffocation, necessarily differ from the totals of the headings bearing similar names in the classification of Causes of Death on pp. 130, 131, as the classification takes account of the cause of the injury, and there only of the nature of the injury.

ENGLAND.—DEATHS from ACCIDENT and NEGLIGENCE at different Periods of Life, in the Year 1889—Males—*continued.*

No.	Cause or Character of Accident.	All Ages.	Ages at Death. Total under 1 Year. Infants under 1 Month.	Others.	1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.

* The deaths of 8 females from Hydrophobia in the year are classed under Zoogenous diseases, in the Table of Causes of Death (*see* p. 113.)
† When a person dies from an operation, performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury.

Of the above 4235 Accidents, 60 are stated to have occurred to Women in a state of Intoxication. And in 66 other cases Death was accelerated by the supervention of Erysipelas, Mortification, Pyæmia, or Tetanus.* Here follow the details:—

Causes inducing or accelerating Deaths from Accident.	All Ages.	Total under 1 Year. Infants under 1 Month.	Others.	1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.
Intoxication at time of Accident	60	-	-	-	-	-	-	-	-	-	1	-	8	18	19	10	4	-	-
Acceleration by Erysipelas	10	-	-	-	-	-	-	-	-	-	-	-	-	1	1	5	1	1	1
Acceleration by Mortification	5	-	-	-	-	-	-	-	-	-	1	1	-	1	-	-	-	1	1
Acceleration by Pyæmia	35	-	-	-	2	-	1	3	3	5	-	1	3	6	4	4	3	3	-
Acceleration by Tetanus*	16	-	-	-	-	-	-	-	3	1	-	1	4	3	1	2	1	-	-

* Cases of Tetanus which are not stated to be the result of injury are classed as "Idiopathic Tetanus" in the Table of Causes of Death (see page 115).

* The deaths of 8 females from Hydrophobia in the year are classed under Zymotic diseases, in the Table of Causes of Death (*see* p. 113.)
† When a person dies from an operation performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury.

Of the above 4235 Accidents, 60 are stated to have occurred to Women in a state of **Intoxication. And in 66 other cases** Death was accelerated by the supervention of **Erysipelas, Mortification, Pyæmia, or Tetanus.*** Here follow the details:—

Causes inducing or accelerating Deaths from Accident.	All Ages.	Total under 1 Year. Infants under 1 Month.	Others.	1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.
Intoxication at time of Accident	60	-	-	-	-	-	-	-	-		1	-	8	18	19	10	4	-	-
Acceleration by Erysipelas	10	-	-	-	-	-	-	-	-	-	-	-	-	1	1	5	1	1	1
Acceleration by Mortification	5	-	-	-	-	-	-	-	-	-	1	1	-	1	-	-	-	1	1
Acceleration by Pyæmia	35	-	-	-	2	-	1	3	2	5	-	1	3	6	4	4	3	3	-
Acceleration by Tetanus*	16	-	-	-	-	-	-	-	3	1	-	1	4	3	1	2	1	-	-

* Cases of Tetanus which are not stated to be the result of injury are classed as "Idiopathic Tetanus" in the Table of Causes of Death (see page 113).

INDEX OF REGISTRATION DISTRICTS.

The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report.* The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881. Since that date two new Registration Districts have been formed, the District of Kensington (1) having been divided into Paddington (1*a*) and Kensington (1*b*), and the District of Anglesey (630) into Anglesey (630*a*) and Holyhead (630*b*).

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Registration Districts," see the "Index of Registration Sub-districts" (pp. 208–217) *and "Index of certain Towns"* (pp. 218, 219).

INDEX OF REGISTRATION SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having compound *names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (573; 2) is the 2d Sub-District of the Wigton District, No. 573.]

Sub-District.	District.	No.
A		
Abbey Holme	Wigton	573; 2
Abbots Bromley	Uttoxeter	366; 2
Abbotsbury	Weymouth	264; 4

REPORT

TO

The Right Honourable CHARLES T. RITCHIE, M.P., President of the Local Government Board, &c. &c.

(1890.)

SIR,

I HAVE the honour to submit to you the following report on the marriages, births, and deaths registered in England and Wales in the year 1890.

POPULATION.

Since my last annual report was presented to you a census has been taken; and the result, subject to final revision, was that in April last the population of England and Wales consisted of 29,001,018 persons.

Assuming that the growth was equable throughout the past intercensal period, the population in the middle of the year 1890 amounted to 28,762,287 persons, of whom 13,939,577 were males and 14,822,710 were females; and it is on this basis that the rates for the year given in the following report have been calculated.

As the rate of growth in the past decennium was considerably less than it had been in the next preceding intercensal period, the estimates of population, based upon the hypothesis that this latter had been maintained, which have been used in the successive annual reports since 1881, have necessarily been in excess of the reality.

Had the rate of growth in 1871–81 been maintained, the population in the middle of 1890 would have amounted to 29,407,649, whereas the results of the recent census reduce the estimate to 28,762,287, showing an excess of the earlier over the later estimate of no less than 645,362. This excess, however, large as it is, is not large enough to cause any very material difference in the death-rates, as the following table shows, in which the death-rate for each year as calculated on the former estimate is put side by side with the death-rate as calculated on the new basis.

TABLE A.—DEATH-RATES as calculated on the EARLIER and LATER ESTIMATES of POPULATION, 1881–90.

Year.	Death-rate per 1000.		Difference.
	By former Estimates.	By new Estimates.	
1881	18·88	18·89	0·01
1882	19·56	19·62	0·06
1883	19·54	19·64	0·10
1884	19·51	19·66	0·15
1885	19·01	19·21	0·20
1886	19·28	19·52	0·24
1887	18·79	19·07	0·28
1888	17·80	18·11	0·31
1889	17·87	18·22	0·35
1890	19·12	19·55	0·43
Decennial Mean	18·94	19·15	0·21

It appears, then, that the death-rates for England and Wales, as published in the successive annual reports since 1880, have never differed from the rates as calculated on the new basis of population by more than 0·35 per 1000, or by about one death in 3000 persons; a difference so insignificant, that for all practical purposes it may be disregarded.

The same is, however, by no means the case with areas of smaller extent, in which the growth is much less equable than in the aggregate country. Here, for instance, are the death-rates for several counties in 1889 as published in the last annual report, and as now recalculated from the new population figures.

TABLE B.—DEATH-RATES per 1000 in 1889.

County.	As published.	As recalculated.
Essex - - - -	16·2	14·8
Cornwall - - - -	18·4	17·3
Lancashire - - - -	21·0	22·3
East Riding - - - -	18·9	19·9
North Riding - - -	16·6	18·0
Monmouthshire - - -	20·3	18·6

When enumerations are only made at decennial intervals, such differences are unavoidable.

In this report all rates given, whether for the aggregate country or for the individual counties, have been recalculated on the new population figures; it being assumed that the growth has been equable throughout the decennium.

MARRIAGES.

The number of marriages registered in the year was 223,028, and corresponded to a rate of 15·5 persons married per 1000 living. In 1886 the rate was only 14·2, and the lowest since civil registration was instituted, but from that year it rose continuously, year by year, until in 1890 it reached the same point as in 1882 and 1883, that point being higher than in any other year since 1877 (Table 2). If, therefore, the

marriage-rate be an index of prosperity, the condition of the country has been improving for four successive years.

Simultaneously with the rise in 1890 in the marriage-rate, there was a rise in the value of British exports, a rise in the average price of wheat, and a rise in the amount cleared at the Bankers' Clearing House, as the following table shows:

TABLE C.—MARRIAGE-RATE, BRITISH EXPORTS and IMPORTS, PRICE of WHEAT, and amount cleared at the London Bankers' Clearing House, 1860–90.*

YEARS.	Marriage-rate.	Value per Head of Population of United Kingdom.			Average Price of Wheat per Quarter.	Amount cleared at the Bankers' Clearing House per Head of Population.

1887	14·4	6 1 3	9 17 11	17 11 7	32 6	218
1888	14·4	6 7 2	10 10 2	18 12 1	31 10	247
1889	15·0	6 13 11	11 10 0	19 19 9	29 9	268
1890	15·5	7 0 7	11 4 5	19 19 7	31 11	271

* The figures in the marriage-rate column are not strictly comparable with those in the value columns, inasmuch as the former relate only to England and Wales, while the latter relate to the whole of the United Kingdom. The figures relating to exports and imports and to the price of wheat are derived from the Board of Trade Statistical Abstracts; and those showing the amount cleared at the London Bankers' Clearing House are calculated upon the population of England and Wales, and are derived from the same source.

Forms of Marriage.—Of the 223,028 marriages contracted in the year, 156,371, or 701 per 1000, were celebrated according to the rites of the Established Church, and 66,657, or 299 per 1000, otherwise. In the immediately preceding year, 1889, the proportions had been respectively 698 and 302; and though the differences between the two years' figures are but small, they are worthy of notice, because only on three previous occasions (1854, 1871, and 1885) had the continuous decline in the proportion of church marriages been broken by an alteration in the opposite direction (Table 5). The proportion of Roman Catholic marriages also slightly rose, namely from 42 per 1000 in both 1888 and 1889 to 43 per 1000 in 1890; while the marriages of the other Christian denominations, the marriages of Jews, and the civil marriages in Superintendent Registrars' offices showed slight fallings off in their proportions.

Among the Church marriages there is a manifest tendency to increase in the proportion of those that are celebrated after publication of banns.

For while the proportion in 1880 was only 870 per 1000, it has risen gradually year by year until in 1889 it was 906, and 909 in 1890.

First marriages; Re-marriages.—It will be seen in Table 7 that of 1000 men married in 1890, 885 were bachelors, and 115 were widowers; while of 1000 women who married, 919 were spinsters and 81 were widows. The number of persons married in 1890 who were described in the register as having been previously divorced, and who are included in the above proportions among the bachelors and the spinsters, was 181, including 87 men and 94 women. This total exceeded that recorded in any of the five preceding years, in which the numbers had been respectively 170, 163, 173, 178, and 150. Of the 87 divorced men, 76 married spinsters, 8 married widows, and 3 married divorced women. Of the 94 divorced women, 64 married bachelors, 27 married widowers, and 3 married divorced men.

Ages at Marriage.—In 7,455, or 3·3 per cent., of the marriages, the ages of both contracting parties were not inserted in the register. The mean ages of the remaining 215,573 couples, whose ages were stated, were 28·32 years for the men and 26·03 years for the women. The mean age of the bachelors was 26·38, of the widowers 44·23, of the spinsters 24·81, and of the widows 40·52 years, the age being in each class the highest as yet recorded, showing that there is an increasing tendency to defer marriage. Evidence of the same fact is given by the decline in the proportion of marriages of boys and girls under 21 years of age, the proportion of the former having fallen from a decennial average (1880–89) of 70 per 1000 to 60 per 1000, and of the latter from 210 to 195 per 1000. The counties in which the proportions of bridegrooms under 21 years of age were the highest in 1890 were Northamptonshire, Bedfordshire, Leicestershire, and Nottinghamshire, and these same four counties also head the list when the average proportions in the preceding ten years are examined. (Table 8).

Signature in Marriage Register.—The men who in 1890 signed the marriage register with marks instead of writing their names were 72 in 1000, while the women were 83 in 1000. In 24 out of 1000 marriages both bridegroom and bride used that form of signature. With the progress of elementary education there has been a continuous diminution in the proportions of both men and women signing with marks; and in 1890 the proportions, as compared with those for 1889, showed a reduction of 7·7 per cent. for men and of 7·8 per cent. for women.

Buildings registered for the Solemnisation of Marriages.—At the end of 1890 there were 15,004 churches or chapels belonging to the Established Church in which marriages could be solemnised, showing an increase of 38 upon the number at the end of the preceding year. There were also 10,553 buildings registered for marriage by other rites than those of the Established Church, showing an increase of 218, or 2·1 per cent., upon the number on the register at the end of 1889. (Table 9).

Certified Places of Worship.—During the year 1890, 568 new buildings were certified for religious worship under the provisions of the Acts 15 & 16 Vict. c. 36, and 18 & 19 Vict. c. 81, while 116 buildings already certified were removed from the register by cancellation; the number of buildings so certified on the register at the end of the year was 26,885. It is probable, however, that some of these are no longer used, though no steps have been taken to remove them from the register by cancellation.

BIRTHS.

The births registered in the year numbered 869,937, and were in the proportion of 30·2 to 1000 persons living. This is the lowest birth-rate recorded in any of the last 50 years, and a further step in the decline which has gone on continuously since 1876, when the rate was 36·3, and at its maximum. (Table 2.)

In registration counties the rate varied from 23·4 in Rutlandshire, 24·5 in Sussex, 25·4 in Dorsetshire, and 25·7 in North Wales, to 33·0 in Northumberland, 34·0 in Monmouthshire, 34·6 in Staffordshire, and 36·5 in Durham, being as usual highest in the mining counties and lowest in the agricultural counties. (Table 10.)

Sex.—The male births numbered 442,070, and the female births 427,867, the former being to the latter in the proportion of 1033 to 1000, the proportion in the preceding decennium having been 1038 to 1000.

Illegitimate Births.—The infants registered as born out of wedlock numbered 38,412, and were in the proportion of 46 to 1000 births, and 1·3 to 1000 persons living, this latter being the lowest proportion as yet recorded (Table 2). The registration counties in which the proportions of illegitimate to total births were highest were, as usually, Norfolk, Herefordshire, Shropshire, Cumberland, Westmorland, and North Wales. (Table 10.)

DEATHS.

The deaths registered in 1890 numbered 562,248, and were in the proportion of 19·5 to 1000 of the population. This was considerably higher than the rate in any of the three preceding years 1887–8–9, in which it had been successively 19·1, 18·1, and 18·2. It was, however, still a low rate, as compared with most earlier years; and it is to be noted that in no one of the ten consecutive years 1881–90, did the rate rise to 20·0 per 1000, whereas in no year previous to those ten had it ever fallen so low (Table 2). The average rate in these ten years was only 19·14 per 1000.

Among the registration counties the lowest rates, in no case as high as 16·0 per 1000, were in Surrey (extra-met.), Sussex, Berkshire, Dorsetshire, and Westmorland, while the highest, in no case under 20·0 per 1000, were in Monmouthshire 20·0, Warwickshire 20·1, Staffordshire 20·3, Northumberland 20·5, Durham 20·5, London 21·0, West Riding 21·1, and Lancashire 23·4. This geographical distribution of low and high rates is much the same as in previous years; the higher rates being in the industrial, and the lower rates in the rural, counties. (Table 10.)

Sex.—The 562,248 deaths included 290,448 of males and 271,800 of females. The death-rate of males was 20·8, and that of females 18·3 per 1000 living of the corresponding sex.

Out of equal numbers living there were 1136 deaths of males to 1000 deaths of females, the difference being greater than in any year since 1877. The conditions of life in recent years appear to have become increasingly unfavourable to males as compared with females, for while, out of equal numbers living, the male deaths in no year before 1863 reached 1100 to 1000 female deaths, since that year they have never once failed to exceed that proportion. (Table 2.)

Ages at Death.—The year 1890 was remarkable for the excessive mortality among persons in the advanced stage of life. The death-rates both of men and of women from 45 to 55, from 55 to 65, and from 65 to 75 years of age were each either the highest on record (Tables 11 and 12), or the highest with some insignificant exceptions. The death-rates also in the decennial periods on either side of the above-mentioned thirty years, namely, among those who were from 35 to 45, and from 75 to 85, years of age were considerably above the average, while this was not the case in either sex with those who were under 35 years of age. The year, like the year 1875, was clearly a bad one for those who had passed the middle point of life, and especially for those among them who were of the male sex.

The proportion of deaths of infants in the first year of life to registered births, or the infantile mortality, was 151 per 1000, the proportion in the preceding ten years having been 142. The proportions varied in registration counties from 87 in Rutlandshire, 95 in Dorsetshire, and 98 in Wiltshire, to 162 in Leicestershire and in West Riding, 163 in London, 164 in Warwickshire, 166 in Staffordshire, and 174 in Lancashire.

Of the 130,955 infants who died in the first year of life, 62,356 were under three months of age, 26,800 between three and six months, and 41,799 over six months. The mortality, as is invariably the case, was much higher among the male than among the female infants; and the differences between the two sexes in this respect were the greater the younger the infants. This is shown in the following table, in which the annual death-rates of infants under three months, between three and six months, and from six to twelve months, are shown for each sex.

TABLE D.—ANNUAL DEATHS per 1000 living at each Age, 1890.

Age.	Males.	Females.	Male Infant Mortality to Female, taken as 1000.
0—3 months -	333	261	1,276
3—6 months -	147	122	1,205
6—12 months -	120	100	1,200
0—1 year - -	204	164	1,244

It will be noted that in both sexes the mortality is higher as the infants are younger; that at each age the male mortality is much higher than the female mortality; and lastly, that while in the first three months the male rate exceeds the female by 28 per cent., in the remaining nine months the excess is scarcely more than 20 per cent.

Urban and Rural mortality.—The increased mortality in 1890 was shared by both the urban and the rural populations, but affected the former in larger proportion than the latter. For while the death-rate in the Urban Districts rose to 20·9, from 19·0 and 19·3 in the two next preceding years, the rate in the Rural Districts rose only from 16·6 and 16·4 to 17·4. Thus out of equal numbers living, there died in 1890 in the Urban Districts 120 persons to 100 in the Rural Districts, while the proportions had been 114 and 118 in the preceding two years. (Table 24.)

Registered Causes of Death.

The deaths, when distributed to the several classes by their assigned causes, gave the rates shown in the following table:—

Table E.—Mortality from the several Classes of Diseases.

Causes of Death.	Total Deaths 1890.	Rate per Million living.										
		1890.	1889.	1888.	1887.	1886.	1885.	1884.	1883.	1882.	1881.	Mean 1881–90.
Zymotic diseases -	73,094	2,541	2,456	2,133	2,702	2,679	2,531	3,116	2,651	3,096	2,659	2,656
Parasitic diseases -	702	24	24	25	30	36	30	39	39	36	39	32
Dietetic diseases -	2,342	81	67	63	64	61	60	58	66	68	65	65
Constitutional dis. -	97,030	3,374	3,223	3,166	3,213	3,370	3,310	3,431	3,425	3,406	3,328	3,325
Developmental dis. -	46,220	1,611	1,550	1,569	1,578	1,638	1,614	1,586	1,641	1,562	1,584	1,593
Local diseases -	293,107	10,364	9,394	9,643	9,867	10,040	10,007	9,618	9,943	9,617	9,351	9,785
Violence - - -	18,770	653	614	622	652	634	634	656	679	672	697	651
Ill-defined and not specified causes -	25,883	900	893	891	968	1,064	1,019	1,160	1,198	1,162	1,164	1,042
All causes -	562,248	19,548	18,221	18,112	19,074	19,522	19,205	19,664	19,642	19,619	18,887	19,149

Zymotic or Specific Febrile Diseases.—The deaths ascribed to these diseases numbered 73,094, and were in the proportion of 2541 to a million persons living; this rate being somewhat higher than those recorded in either of the two next preceding years, but nevertheless considerably below the decennial average.

The excess in 1890, as compared with the preceding year, was due to the prevalence of two diseases, whooping-cough and influenza. Under all the other headings in the class there was either a decrease or a practically stationary condition.

The deaths from *small-pox* were only 16, having been 23 in 1889; and each of these numbers was less than one tenth of the smallest number registered in any preceding year. There were also 83 and 95 deaths in the two years attributed to chicken-pox, and it is possible that some of these may have been mistaken cases of small-pox. This, however, will not in any degree account for the great falling off in the deaths ascribed to small-pox; for in each previous year since 1874 there had been practically as many, and in most years even more, deaths ascribed to chicken-pox.

The deaths from *measles* numbered 12,614, and were in the proportion of 439 per million living. This proportion was somewhat lower than that recorded in the immediately preceding year, but practically tallied with the average rate in the current decennium. Measles is a disease on which sanitary measures have apparently had little, if any, effect; for the average annual mortality from it in the past quinquennium was as high almost as in 1858–60, and somewhat higher than in any of the intervening quinquennia (Table 17). In 1890 this disease, though not more than usually destructive in the aggregate country, was excessively prevalent in some parts, and the figures for counties in Table 23 (page l) together with those for districts (pages 170–192), show that among the areas thus seriously affected were London, with West Ham, Middlesex, and Hertfordshire; South Lancashire, Cheshire, and the contiguous part of North Staffordshire; the districts in Nottinghamshire and Derbyshire that lie in the angle between the Trent and the Derwent, with the contiguous districts in the West Riding; and in the south-west of England, the part

of Cornwall comprised in the districts of Truro, Redruth, Falmouth, and Helston.

The deaths from *scarlet fever* numbered 6,974, and were in the proportion of 242 per million persons living, a proportion practically identical with the average in the preceding quinquennium (Table 16). It is a notable fact that the mortality from this disease, which prior to 1885 had scarcely ever been less than 500 per million, and only once (1838) less than 400, fell suddenly to 233 per million, and has never again risen to as high a point as 300 per million. In 1890 the highest mortalities per million from this disease were in Lancashire 558, South Wales 501, West Riding 349, Durham 339, Cumberland 324, and Warwickshire 319; such mining and industrial counties, as were pointed out in a previous report (47th Annual Report, pages xiii–xiv), being specially afflicted by this disease.

The deaths from *enteric fever* numbered 5,146, and were in the proportion of 179 to a million persons living; a rate practically the same as those recorded in each of the two next preceding years. For six consecutive years, 1885–90, the rate of mortality from this disease has not exceeded 185 per million, whereas in no previous year was it once lower than 212.

Enteric fever was first distinguished from other continued fevers in the Annual Reports in 1869; and if we divide the years since that date into three periods, in the first period, from 1869 to 1876, the rate fluctuated from 390 to 309; in the second period, 1877 to 1884, from 306 to 212; and in the third period, from 1885 to 1890, from 185 to 172. Nor can this marked decline be ascribed to confusion between enteric fever and typhus or simple and ill-defined fevers, for the deaths classed under each of these headings have also rapidly declined, and in 1890 were at the minimum as yet reached.

But though there has been this great decrease in enteric fever in the aggregate country, there are parts of it in which the disease appears to be still unduly prevalent. Such, for instance, is the tract of ground that runs along the east side of Northumberland and Durham, from Morpeth on the north to Middlesbrough and Guisbrough on the south. In this space, which comprises eighteen Registration Districts, and had in the middle of 1890 a population estimated as 1,524,549, there were in that year no fewer than 601 deaths from enteric fever, giving a rate of 394 per million living, which was not only much more than twice the rate for all England and Wales, but was almost twice as high as the rate in the twenty-eight great towns included in the Weekly Return, and indeed higher than the rate in any one of these twenty-eight towns, with the single exception of Salford. Moreover, examination of the Annual Reports for the three previous years, 1887–8–9, shows that in a large proportion of these eighteen districts there had been in those years also excessive enteric fever mortality.

The deaths ascribed to *diphtheria* numbered 5150, and were in the proportion of 179 to a million persons living, a proportion somewhat lower than that recorded in 1889, but nevertheless above the average of recent years. (Tables 16 and 17.) There was excess of mortality from this disease in Salford and in parts of Monmouthshire and of Wiltshire, but the places in which it was most fatal were, as usual, chiefly in the South East; and, among the areas thus affected, the most important was London, with the adjoining parts of Middlesex, Essex, Surrey, and Kent. There were also outbreaks in Eastbourne and in Hastings, among the Sussex districts, in Tendring in Essex, in Ipswich in Suffolk, in Bishop Stortford in Hertfordshire, in Bedford and Biggleswade in Bedfordshire, in Wokingham and Cookham in Berkshire, and in Farnham in Surrey, all being situated in what was termed in a previous report (47th Annual Report, page xiii) the South-Eastern Diphtheritic Region.

The deaths from *whooping-cough*, 13,756 in number, were in the proportion of 478 to a million persons living, a higher proportion than in any other year of the decennium with the exceptions of 1882 and 1885, when the proportions were respectively 579 and 481 per million. (Table 16). Among the areas in which this disease appears to have been most destructive were Cornwall with Devonshire; Monmouthshire with Glamorganshire, and the adjoining parts of Brecknockshire and Gloucestershire; and London with Middlesex, Essex, Cambridgeshire, and Huntingdonshire.

Influenza.—The year 1890 was marked by a visitation of this country by epidemic influenza. Every year there are some few deaths ascribed to influenza; but the vagueness with which the term is often employed, and the absence of any very constant pathological feature even in the undoubted cases of this disease, give fair grounds for doubting whether the influenza deaths of ordinary years are of the same nature and due to the same cause as are the deaths in the epidemic periods, and whether they should not have been classed either under Pneumonia or Bronchitis, rather than under the more specific designation.

If, however, there be in ordinary years a transference of deaths from diseases of the respiratory organs to influenza, there is most assuredly in epidemic years a very much greater transference in the contrary direction, a large proportion of the deaths due to the epidemic influence being registered, not under Influenza, but under such headings as Bronchitis, Pneumonia, and the like. For an indisputable epidemic of influenza is almost invariably accompanied, not only by a notable increase of mortality under that heading itself, but also by notable increases under these other headings.

Under these circumstances, it is plain that too much reliance must not be placed upon the official returns of influenza mortality. In the years of epidemics such mortality will be much understated, while the contrary will probably be the case in non-epidemic periods. A careful examination of the figures leaves, however, no reasonable doubt that epidemic influenza was really prevalent in this country in 1841, 1847–8–9, 1851, 1853, and 1858; while the mortality figures for the series of years since this last date give no certain evidence of the existence of an epidemic of this disease, until we reach 1890, that is for more than thirty years.

The outbreak of 1890 began in reality near the close of the preceding year, the disease having apparently made its way into our ports from the Continent, and diffused itself rapidly over the country. It was, however, not until January that the epidemic was thoroughly established. In London it began to subside before the close of that month, and though both its maximum and its subsidence were somewhat later in most other parts of the country, it may be said—disregarding some few exceptional districts—to have come to an end before the close of the quarter.

The total number of deaths directly ascribed to influenza in the year was only 4523, or 157 per million living; but there can be no doubt that the deaths really caused by this disease were far more numerous, for concomitantly with the epidemic there was an enormous rise in the mortality under other headings, and especially under pneumonia and bronchitis; rises which could not be explained by the usual cause of increase under these headings, viz., cold weather, inasmuch as the temperature in the month of January, when the epidemic in London was at its worst, was 6°·8 Fahr., and that of the whole quarter 2°·5 Fahr., above the average.

If we assume—as we may, though not with certainty, yet with much probability—that the increased mortality from pneumonia, bronchitis, and diseases of the organs of circulation, as compared with the average of the nine preceding years of the decennium, was due to the same cause as were the deaths directly ascribed to influenza, the total number of deaths due

directly or indirectly to the epidemic influenza was not merely 4523 but 27,074, or 941 per million living.

The deaths from *diarrhœal affections* numbered 17,837, or 620 per million living. This rate was somewhat below the average, doubtlessly in consequence of the cold weather in July and August, in which months the temperature was 2°·2 F. and 1°·6 F., respectively, below the average.

Hydrophobia.—The deaths from this disease, which had been 30 in the preceding year, 1889, and had averaged 24 annually in the three years 1887–8–9, were only eight in 1890, and fewer than in any year since 1868. This notable decrease was coincident with, and doubtlessly due to, a similar decline in canine rabies; the number of dogs returned to the Board of Agriculture as afflicted by this disease having fallen from 312 in 1889, and an average of 230 in the three years 1887–8–9, to 129 in 1890; and it seems impossible not to associate this remarkable decline with the application of the Muzzling Order by the Board of Agriculture, from 1st January 1890, to those counties in which rabies was known to have been prevalent. These were the counties in which, as was shown in a previous report (51st Annual Report, pages xiii–xv), hydrophobia has been most common, namely, the groups of counties of which London and Lancashire are respectively the centres.

Of the 8 deaths from hydrophobia in 1890, 3 occurred in the West Riding, 2 in Lancashire, 2 in London, and 1 in Dorsetshire.

Puerperal Fever.—The deaths ascribed to this cause were 1956, and, adding to these 2299 deaths from the accidents of childbirth, we have a total of 4255 deaths directly ascribed to parturition. This was in the proportion of 4·89 to 1000 registered births, a rate somewhat above the average in the preceding decennium, which had been 4·64. Concomitantly with the increase under puerperal fever, there was, as almost invariably is the case, an increase under erysipelas.

Dietetic Diseases.—The chief heading in this class is intemperance. The deaths attributed to this cause have increased year by year since 1884, and in 1890 were both absolutely and relatively to the population more numerous than in any previous year. They numbered 2037, and were in the proportion of 70 to a million living, the highest previous rate having been 55, and this in the next preceding year, 1889. In addition to the 2037 deaths directly ascribed to intemperance, there were 218 others among the deaths from accident in which it was stated that the deceased was drunk or suffering from delirium tremens when the accident occurred. Of these 218 deaths, 136 were of men and 82 of women (pages 196 and 199).

Constitutional Diseases.—The deaths in this class numbered 97,030, being in the proportion of 3374 to a million persons living; a rate which, though lower than the decennial average, was considerably higher than the rate recorded in any of the three next preceding years, 1887–8–9.

The increase was partly due to further advances in the mortality from cancer and from diabetes; the rate from each of these steadily increasing diseases in 1890 having been the highest on record; but the main part of the increase in the class was under the headings Phthisis and Other Tubercular Diseases, the mortality under these two headings together having risen from 2283, 2221, and 2258 per million in 1887, 1888, and 1889, to 2376 in 1890. This sudden interruption in the almost unbroken decrease which had been shown by these diseases for a long series of years requires some explanation; and the most probable interpretation is that a number of weakly persons of phthisical constitution, who might otherwise have continued to live for some years, were carried off prematurely by the influenza epidemic

of the first quarter of the year. This explanation is supported by the fact that in London, as is shown by the Weekly Returns, the deaths from phthisis were in great excess during the whole prevalence of the epidemic, and fell to their usual level when the epidemic subsided.

Developmental Diseases.—The mortality under the heading Old Age, which had been declining pretty steadily for some years, again rose in 1890; not improbably from the same cause as was suggested above in the case of phthisis. The deaths also ascribed to *premature birth*, which, as has been pointed out in previous reports, have been for a long series of years becoming more and more numerous in proportion to the registered births, showed a further increase in 1890, having risen progressively from 11·19 per 1000 births in 1861–5 to 16·29 in 1889, and 17·48 in 1890.

Local Diseases.—The deaths in this very large and very heterogeneous class numbered 298,107, and were in the proportion of 10,364 per million living. This rate was not only considerably above the decennial average, but higher than in any other year of the decennium.

The increase was almost entirely under two headings, Diseases of the Organs of Circulation, and Diseases of the Respiratory System. The deaths under the former of these two headings were 1757 per million living, the average rate in the preceding five years having been only 1,657, and the highest rate in any year 1695 per million.

The deaths from diseases of the organs of respiration were 4120 per million living, against an average of 3563 per million in the preceding quinquennium, and more numerous in proportion to the population than in any year in the table (Table 16), with the exceptions of 1875 and 1879.

The great rise in the mortality under these two headings in London during the period when influenza was epidemic makes it highly probable that at any rate a very large share in the increased mortality under them in the whole country was in reality determined by that epidemic; persons who were weakened by an attack of influenza falling easy victims to other incidental maladies.

Violence.—The deaths ascribed to some or other form of violence numbered 18,770, or 653 per million living, a ratio somewhat in excess of the average in the previous five years, which was 631.

This slight excess was due to an increase under *accident and negligence*, the mortality both from *homicide* and from *suicide* being below the average. The deaths from accident and negligence numbered 16,263, and of these 11,600 were of males, and only 4663 of females.

Among the headings under which these deaths are grouped is one in which negligence has more than an average share, namely, suffocation in bed. In the course of the year no fewer than 1544 children, almost all infants in the first year of life, were certified as having died from this cause. This was a larger number than in any preceding year; and, indeed, it appears that the mortality under this heading has been slowly increasing for the past five years, as the following table shows.

TABLE F.—DEATHS of INFANTS from SUFFOCATION IN BED to 100,000 BIRTHS.

Year.	Deaths per 100,000 Births.	Year.	Deaths per 100,000 Births.
1881	130	1886	136
1882	130	1887	141
1883	129	1888	155
1884	125	1889	157
1885	124	1890	174

It will be well therefore to subject these deaths to more minute examination.

The first thing to be noted is that the younger the infant the greater the chance of its suffocation; probably because the very young infant succumbs more easily, and because there is more uninterrupted contact with its mother's body. Thus of the 1517 infants under one year of age who thus died in 1890, 354 were in the first month of life, the average for the remaining eleven months being only 106 per month of life.

Secondly, the accident is more frequent in winter than in summer, doubtlessly owing to the heaping up of bed clothes in the colder weather. Comparing the six winter months with the six warmer months of the year, 60 per cent. of the deaths are registered in the former, and only 40 per cent. in the latter period.

But the point of most interest as regards these deaths from overlying of infants is their distribution over the days, or rather the nights, of the week. An examination of a large number of deaths of infants, concerning which inquests had been held, and the cause and day of death stated in the coroner's certificate, has yielded the results given in the following table, in which the first column of figures relates to the deaths from suffocation in bed.

TABLE G.—DISTRIBUTION over the WEEK, of DEATHS of INFANTS on which INQUESTS have been held.

Day of Week.	Proportions per 1000.	
	Suffocation in Bed.	Other Causes.
Sunday - - -	283	180
Monday - -	124	132
Tuesday - - -	137	145
Wednesday - -	116	139
Thursday - - -	115	136
Friday - - -	107	128
Saturday - -	118	140
	1,000	1,000

Note.—This Table is based on 2020 inquest cases in various parts of the country; in 767 of which cases the cause of death was returned as suffocation in bed.

In interpreting this table, it must be held in mind that the deaths from overlying on any given night will be referred to the day succeeding that night. Thus a woman going to bed with her infant on, say, Saturday night, if she finds on waking the next morning that the infant is dead, will describe the death, of which the precise hour is unknown, as having happened on Sunday morning; and so with the other days.

Remembering this, it will be noted that the proportion of deaths of infants from overlying is more than twice as high on Saturday night as on any other night in the week. The next highest proportion is on Monday night, and after this on Sunday. Through Tuesday, Wednesday, and Thursday nights there is a gradual decline, followed by a slight but distinct rise in the proportion on Friday night.

Now there is one explanation, and as far as can be seen only one, of this curious distribution, and that explanation is that it is determined by differences in the amount of intoxication on different days of the week. Saturday afternoon is the most general holiday and pay day, and is also a day on which public-houses are in full activity. Monday is also in some

places a workman's holiday and a day when public-houses are fully open, and on Monday the wages of Saturday are as yet probably not exhausted. This last condition will also apply to Sunday, which also is a non-working day; but on Sunday the public-houses are partially closed, and the facilities of obtaining drink diminished; so that the smaller proportion of deaths on the night of that day, as compared with Monday night, finds a probable explanation. Monday night passed, begins the real working part of the week, and the infantile deaths fall off in number, the proportion getting less and less as the week's money is gradually exhausted, until on Friday night there is again a slight rise, probably determined by that day being also, in some industries and places, a pay-day. Such seems the only explanation that can be suggested for the distribution of the deaths from overlying; but if this explanation be the true one, it can scarcely be doubted that a similar interpretation must be put upon the very similar distribution of infantile deaths from other causes than overlying, as shown in the second column of figures in Table G, which gives the daily distribution of deaths of infants concerning which inquests have been held but other verdicts found than "suffocation in bed"; these other verdicts being to a very large extent such unsatisfactory findings as "natural causes," "convulsions," and the like. It is impossible to believe that an infant is more likely to die, *cæteris paribus*, on one day of the week than another from "natural causes" or from "convulsions," and the suggestion now offered is that these findings by juries are to a large extent mere aliases for the overlying of an infant, or neglect of its requirements, by a drunken parent.

Ill-defined and Unspecified Causes.—In 25,883 cases, or 4·6 per cent. of the total deaths, the cause of death was so inadequately stated that the death had to be referred to this class; the proportion was slightly less than in the immediately preceding years 1888 and 1889, in each of which it had been 4·9. The decline was doubtlessly in part due to the 3768 letters of inquiry concerning doubtful cases (against 3175 such letters in the previous year) which were sent to medical men. The result of this process was to transfer a large number of cases from ill-defined to definite headings. Thus, for instance, 522 deaths were removed from more or less vague headings, mainly "Tumour," to Cancer or Malignant Disease, and 48 to Syphilis.

Certification of Causes of Death.—Of the 562,248 deaths registered during the year 1890, the causes of 514,720, or of 91·6 per cent., were certified by registered medical practitioners; and the causes of 31,581, or of 5·6 per cent., were certified by coroners after inquest, while the causes of the remaining 15,947 deaths, or of 2·8 per cent., were not certified. The per-centage of inquest cases was the same as it had been in 1889, while that of uncertified deaths showed a further step in the progressive decline which has been noted in previous reports. The 15,947 uncertified cases in 1890 included deaths of infants who had been attended only by midwives, and of persons attended by unregistered practitioners, as well as of persons who had no medical attendance of any kind in their last illness. The lowest proportions per cent. of uncertified deaths in registration counties were 0·6 in extra-metropolitan Middlesex, 0·9 in London and in Wiltshire, and 1·0 in extra-Metropolitan Surrey; while the highest were 4·1 in Derbyshire and in Monmouthshire, 4·7 in Durham, 5·0 in Herefordshire, 5·5 in South Wales, 6·0 in Huntingdonshire, and 6·4 in North Wales. The unusually high proportion in Monmouthshire was due to a colliery explosion which caused a large number of deaths, inquests having been held only on a few of the bodies, while the remainder were registered uncertified. In other counties the proportions did not materially differ from those recorded in 1889.

Offences against the Registration Act of 1874.—In the course of the year 19 prosecutions for offences against this Act were instituted by me, and in each case the prosecution was successful. In 10 of these cases the offence consisted in false statements as to the legitimacy of a child; in 3 others, in false statements as to a woman being married who was really unmarried; in one, in neglect to register a birth after notice to do so; in 2 cases, in the giving of false certificates of death by unregistered medical men; in one, in giving a false certificate of stillbirth by a registered medical man; in one, in using a forged certificate of cause of death; and in one, in permitting a child to be buried as stillborn without a certificate that such was the case. In addition to these 19 cases, a man was prosecuted by the Treasury at my instance, under the Act 19 & 20 Vict. c. 119., s. 18, and convicted of making a false declaration on giving notice of marriage.

Progress of Registration.

The names in the alphabetical indexes of births, deaths, and marriages recorded in the national register of England and Wales were increased in the year 1890 by 1,878,241, this addition raising the aggregate number of names in the indexes, which at the end of 1890 embraced a period of 53½ years, to 81,264,504. The number of searches in 1890 in the various registers was 43,874, exceeding the number in the previous year by 2872. The number of certificates issued was 31,686, showing an increase of 1195 on the number in 1889. The fees received for searches and certificates in 1890 and paid into Her Majesty's Exchequer amounted to 6,178*l.* 4*s.* 0*d.*, exceeding the amount received in the previous year by 294*l.* 1*s.* 6*d.* (Table 26.)

A list of the various public registers and records lodged in the General Register Office, Somerset House, was published in the 34th Annual Report, pages xxi–xxii.

Mortality in the Army.*

The average strength of the Army, at home and abroad, was 209,221, and the deaths were 1813, the rate of mortality thus being 8·7 per 1000, against 9·7 and 9·3 respectively in the preceding two years. The mortality in the army abroad was 11·4 per 1000, the mean rate in the preceding five years having been 15·8; while the rate in the Army at home was 6·0, a rate 1·0 per 1000 higher than that in 1889, but 0·5 below the mean rate in the five years 1885–89, such mean rate itself having shown a considerable decline from the mean rates in previous quinquennia. (Table 29.)

Mortality in the Navy.†

The average force afloat in 1890 was 53,350. The deaths were 456, being in the ratio of 8·54 per 1000 of the strength. Of the 456 deaths, 220 were due to disease, and 236 to violence; so that the death-rate from disease was 4·12, and that from violence 4·42 per 1000.

Of the 236 deaths from violence, 208 resulted from accidental drowning (including 173 in consequence of the wreck of the "Serpent"), 24 from other accidental causes, and 4 from suicide.

---

* Based upon returns furnished by His Royal Highness the Commander-in-Chief.

† Based upon returns furnished by the Director-General of the Medical Department of the Navy.

Births and Deaths of British Subjects at Sea.

Marine Register Book.—In accordance with the Births and Deaths Registration Act of 1874, commanding officers of British ships, whether in Her Majesty's service or not, are required, under a penalty, to transmit returns of all births and deaths occurring on board their ships to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrars-General of England, Scotland, and Ireland. These certified copies of entries of births and deaths at sea constitute the "Marine Register Book." To this Register were added 186 entries of births and 3573 of deaths during the year 1890. Of these 3573 deaths, so far as could be judged from the entries, which are not always very precise, 1684 were of persons of English origin, while 452 others were of persons of British origin.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports that the number of masters and seamen afloat in registered vessels belonging to the mercantile marine of the United Kingdom, including the islands in the British Seas, during the year 1890 was 236,108, showing an increase of 5845 upon the number in the preceding year. The reported deaths among masters and seamen during 1890 numbered 3305, corresponding to an annual rate of 14·0 per 1000 of the strength; this was 0·9 per 1000 higher than the rate in the previous year, but was 1·2 per 1000 below the mean rate in the five years 1885–89. (Table 31.)

Among *passengers* on board merchant vessels at sea (Table 32), 108 births and 515 deaths were reported in 1890, the births being below and the deaths slightly above those recorded in the preceding year.

International Vital Statistics.

In Tables 39–56 will be found international vital statistics relating to most of the principal European States. As the sex and age distribution of the population differs greatly in different countries, and as the rates largely depend upon such distribution, as has been repeatedly pointed out in previous reports, the rates in one country cannot be safely compared with the rates in another, without correction.

In order to allow fair comparison, it is most desirable that the various countries should agree upon some standard population, that is a population with fixed sex and age distribution, for international use; and should calculate their birth, marriage, and death rates by such standard.

The most noticeable point in these international tables is the universal rise in the death rate. In every country from which returns were received, the mortality in 1890 was higher, and in most cases very considerably higher, than it had been in the preceding year. The explanation of this universal increase is doubtlessly to be found in the very general prevalence throughout Europe of epidemic influenza.

I have the honour to be,
Sir,
Your faithful Servant,
BRYDGES P. HENNIKER,
Registrar-General.

General Register Office, Somerset House,
26th November 1891.

Remarks on the Meteorology of the Year 1890.*

By James Glaisher, Esq., F.R.S., &c.

The following remarks, both with regard to atmospheric pressure and temperature, are based on observations made near London, but they may be taken as having a general application.

Atmospheric Pressure.—The reading of the barometer was generally above the average till the 17th of January, the mean daily excess for these 17 days being 0·16 in.; from January 18th to the 28th it was below, being particularly so on the 22nd and 23rd, when it was as much as 0·77 in. and 1·18 in. respectively below its average, the mean daily deficiency for these 11 days being 0·38 in.; from January 29th to February 11th it was above, the mean daily excess being 0·32 in.; from February 12th to the 17th it was below, particularly so on the 15th, when it was 0·54 in. below its average; the mean daily deficiency for the 6 days ending February 17th being 0·23 in.; from February 18th to March 4th it was generally above, being particularly so on the 23rd and 24th of February when it was as much as 0·67 in. and 0·57 in. respectively above its average; the mean daily excess for the 15 days ending March 4th being 0·30 in.; from March 5th to the 26th it was below, being particularly so on the 8th, 16th, 17th, 18th, 19th, 20th, 24th, and 25th days, the mean daily deficiency for these 8 days being 0·61 in., and the mean daily deficiency for the 22 days ending March 26th was 0·33 in.; from March 27th to April 5th it was above, the mean daily excess being 0·17 in.; from April 6th to May 20th it was generally below, being particularly so on the 15th, 16th, and 25th days of April, when it was as much as 0·53 in., 0·52 in., and 0·60 in. respectively below its average, the mean daily deficiency for the 45 days ending May 20th being 0·18 in.; from May 21 to June 25th it was generally above, the mean daily excess being 0·10 in.; from June 26th to July 19th it was generally below, being particularly so on the last day of June and first day of July, when it was as much as 0·69 in. and 0·68 in. respectively below its average; the mean daily deficiency for the 24 days ending July 19th being 0·19 in.; from July 20th to August 9th it was generally above, the mean daily excess being 0·12 in.; from August 10th to the 29th it was generally below, being particularly so on the 26th and 27th days when it was as much as 0·51 in. and 0·62 in. respectively below its average; the mean daily deficiency for the 20 days ending August 29th being 0·21 in.; from August 30th to September 15th it was above, the mean daily excess being 0·19 in.; from September 16th to the 22nd it was below, the mean daily deficiency being 0·15 in.; from September 23rd to October 30th it was generally above, being particularly so on the 26th and 27th of September, and the 9th, 10th, 12th, 22nd, and 23rd of October, the mean daily excess for these 7 days being 0·54 in.; and the mean daily excess for the 38 days ending October 30th, was 0·24 in.; from October 31st to November 13th it was below, being particularly so on the 2nd, 4th, and 7th of November, when it was as much as 0·70 in., 0·72 in., and 0·75 in. respectively below its average; the mean daily deficiency for the 14 days ending November 13th being 0·37 in.; from November 14th to December 14th it was generally above, being particularly so on the 17th, 19th, and 20th of November, when it was much as 0·50 in., 0·60 in., and 0·59 in. respectively above its average; the mean daily excess for the 31 days being 0·14 in.; from December 15th to 20th it was below, being as much as 0·73 in. below on the 19th; the mean daily deficiency for these 6 days being 0·29 in.; and from December 21st to the 31st it was above, the mean daily excess being 0·18 in.

---

* For Meteorological Tables, *see* pp. lvi–lxi.

The highest reading of the barometer at the height of 150 feet above the sea was 30·484 ins. on February 23rd, and the lowest was 28·522 ins. on January 23rd; the yearly range was 1·962 ins.

Temperature.—The temperature of the air was below its average till the 3rd of January, being particularly so on the 1st, when it was as much as 9°·7 below, the mean daily deficiency for these three days being 7°·0; from January 4th to February 2nd it was generally above, being particularly so on the 6th, 7th, 12th, 13th, 15th, 16th, and 25th of January, when it was as much as 13°·4, 12°·3, 10°·6, 10°·0, 10°·4, 10°·3, and 10°·7 respectively above its average, and on several other days it varied from 5° to 8½° above; the mean daily excess for the 30 days ending February 2nd, being 5°·8; from February 3rd to March 5th it was below, being particularly so from the 1st to the 4th of March, when it was 11°9, 15°·1, 16°·7, and 20°·0 respectively below its average, and on several other days the deficiency varied from 5° to 9¾°; the mean daily deficiency for the 31 days ending March 5th being 5°·2; from March 6th to the 17th it was above, the mean daily excess being 3°·0; from March 18th to the 21st it was below, the mean daily deficiency being 2°·4; from March 22nd to the 31st it was above, being particularly so on the 28th, when it was as much as 11°·7 above its average, the mean daily excess being 4°·4; from April 1st to the 28th it was below, the mean daily deficiency being 3°·3; from April 29th to May 25th it was generally above, the mean daily excess being 1°·7; from May 26th to September 14th it was generally below, being particularly so on the 5th, 6th, 11th, and 12th of July, and the 30th and 31st of August, the mean daily deficiency for these 6 days being 11°·3; and on several other days in June, July, and August it was as much as 8° and 9° below, the mean daily deficiency for the 116 days ending September 14th being 2°·8; from September 15th to October 7th it was generally above, the mean daily excess being 2°·8; from October 8th to the 29th it was below, being particularly so on the 27th and 28th, when it was as much as 10°·4 and 16°·1 respectively below its average; the mean daily deficiency for the 22 days ending October 29th being 3°·6; from October 30th to November 24th it was generally above, being particularly so on the 18th, 19th, and 23rd days, when it was as much as 10°·8, 11°, and 10°·9 respectively above its average, the mean daily excess for the 28 days being 2°·6; and from November 25th to December 31st it was below, being as much as 21°·4 below on November 28th, and 21°·0 below on December 22nd; and on other days it varied from 1°·9 below on the 4th of December, to 17°·7 below on the 14th of December, the mean daily deficiency for the 37 days ending December 31st being 11°·5.

The highest temperatures of the air were at Royston 83°·7, at the Royal Observatory 82°·8, and at Barnet 82°; and the lowest were 4°·3 at Royston, 6°·0 at Salisbury, and 8°·0 at Barnet and Oxford.

Rainfall.—The fall of rain was above its average in January; below in February; and above its average again in March. The total fall in the three months at Greenwich was 5·10 ins., or 0·13 in. above the average. The fall of rain was above its average in April, below in May, and above its average again in June. The total fall in the three months at Greenwich was 5·65 ins., or 0·14 in. below the average. The fall of rain was above its average in both July and August, and below in September. The total fall for the three months at Greenwich was 7·69 ins., or 0·39 in. above the average. The fall of rain in each of the months of October, November, and December was below its average. The total fall for the three months at Greenwich was 3·44 ins., or 3·65 ins., below the average.

The heaviest falls of rain in the year at our stations were 50·43 ins. at Stonyhurst, 45·10 ins. at Truro, and 36·19 ins. at Plymouth.

The least falls were at Nottingham 17·76 ins., at Oxford 18·41 ins., and at Royston 18·68 ins.

The greatest numbers of days of rain were at Truro 226, at Stonyhurst 223, and at Guernsey 221; and the smallest numbers of rainy days were at Oxford 135, at Barnet 143, and at Wolverhampton 148.

Thunderstorms occurred on 51 days at the different stations during the year; of these, 15 were in August, 9 in May, 8 in June, 4 in September, 3 in each of the months of January, April, July, and October, 2 in March, and one in November.

Thunder was heard but lightning was not seen on 53 days during the year; of these, 17 were in August, 10 in May, 7 in June, 5 in both April and July, 4 in March, 2 in both September and October, and 1 in January.

Lightning was seen but thunder was not heard on 34 days during the year; of these, 10 were in August, 6 in May, 5 in January, 2 in each of the months of April, June, July, September, October, and November, and 1 in February.

Solar halos were seen on 105 days during the year; of these, 16 were were in May, 14 in July, 13 in April, 12 in November, 10 in June, 9 in February, 8 in March, 7 in September, 6 in January, 5 in August, 4 in October, and one in December.

Lunar halos were seen on 38 days during the year; of these, 5 were in each of the months of May, October, and November, 4 in each of the months of January, September, and December, 3 in both February and March, 2 in both April and June, and one in August.

Snow fell on 67 days during the year; of these, 22 were in December, 10 in February, 9 in both January and March, 7 in November, 5 in April, 4 in October, and one in May; the last fall in the spring was on May 15th at Halifax; none fell in June, July, August, or September; and the first fall in the autumn was on the 18th at the Royal Observatory and Blackheath.

Hail fell on 74 days during the year; of these, 12 were in November, 11 in January, 10 in April, 8 in each of the months of March, August, and December, 5 in both February and October, 3 in both May and June, and one in July.

Fog prevailed on 172 days during the year; of these 22 were in both January and December; 20 in both February and September, 15 in both October and November, 14 in March, 12 in April, 11 in June, 9 in July, and 6 in both May and August.

PRELIMINARY TABLES.

* Deaths from this cause prior to 1881 were classed, partly with "Diseases of Respiratory System" and partly with "Ill-defined and not specified Causes."

† Deaths from these diseases prior to 1881 were classed with "Other Tubercular and Scrofulous Diseases."

TABLE 16.—ENGLAND.—**Annual Death-rates, from Various Causes, to a Million Persons living, 1866–90.**

(Decimals are omitted, the nearest whole number being taken. When the Deaths from any Cause were too few to give a rate of 0·5, a cipher is inserted.)

CAUSE OF DEATH.	1866.	1867.	1868.	1869.	1870.	1871.	1872.	1873.	1874.	1875.	1876.	1877.	1878.	1879.	1880.	1881.	1882.	1883.	1884.	1885.	1886.	1887.	1888.	1889.	1890.

NOTE.—*Up to and including* 1886 masters were excluded from the above employment and mortality figures; the latter of which contained some cases of men who died in colonial vessels and fishing vessels not registered under the Merchant Shipping Acts, whose crews are not included in the employment column.

Since 1886 masters are included in both columns, and the employment and mortality figures relate only to persons employed in registered vessels belonging to the United Kingdom, the Isle of Man, and Channel Islands.

* The prices of Consols for the years 1840–52 relate to the 12 months beginning 1st April; from 1853 onw the prices relate to calendar years. For the years 1840–88 the prices relate to stock bearing 3 per cent. inte for 1889–90 to stock bearing 2¾ per cent.

† From the Board of Trade Statistical Abstract.

‡ The prices of coal are derived from Parliamentary Returns furnished by the Registrar of the London Market, by order of the House of Commons.

§ Derived from Returns, published by the Local Government Board, of the number of persons in recei Relief on the last day of each week.

INTERNATIONAL VITAL STATISTICS.

NOTE.—The population in the four years 1862-65 and in the years 1867-69 is estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census year. † Cholera prevailed in 1865–66, and war raged in 1870 and 1871.

Note.—Statistics for the 7 years 1871-77 were not issued owing to the disturbed state of the country. The decline in registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred in that year.

* Censuses were taken on 31st December 1860, 1866, and 1877.

Note.—The numbers for Rome were first included with those for the Kingdom of Italy in 1872. The population figures given for census years show the numbers enumerated on 31st December in each of those years; whereas for the end of each of the other years the population is estimated on the assumption that the rate of increase which prevailed in the last inter-censal period has since been maintained.

* Census year.

Table 57.—ENGLAND. Changes in the Constitution of Registration Districts and Sub-districts during the Year 1890.

N.B.—(1.) The Name of the District is in Small Capitals, that of the Sub-district in *Italics*.
(2.) The Populations quoted are the unrevised Numbers enumerated at the Census of 1891.

No. of District.	Name of Registration District.	Date of Change.	Nature of Change.
3	Chelsea - -	1890. 1 October -	The sub-district of *Chelsea North-East* was dissolved. The portion of the sub-district which forms the detached part of the parish of Chelsea was constituted a separate sub-district, named *Chelsea Kensal Town* (population 21,787). The remainder of the sub-district was added to *Chelsea North-West* sub-district, which was re-named *Chelsea North* (population 41,657), and the sub-districts in the district were re-numbered thus:—1. *Chelsea Kensal Town*, 2. *Chelsea North*, and 3. *Chelsea South*.
15	Shoreditch - -	1 April -	The sub-districts of *Holywell* and *St. Leonard* were united under the name of *Shoreditch South* (aggregate population 20,098).
50	Maidstone - -	1 October -	The three sub-districts of *Marden*, *Loose*, and *Yalding* were dissolved, and the parishes of which they consisted re-arranged into two sub-districts as follows:—The new sub-district of *Yalding* comprises the parishes of Yalding, Nettlestead, Marden, and Staplehurst (population 7,277); and the new sub-district of *Loose* comprises the parishes of Teston, West Farleigh, Hunton, Linton (including part of Maidstone added to Linton), Boughton Monchelsea, Otham, Bearsted, Loose, East Farleigh, Barming, and West Barming (population 8,630).
91	Isle of Wight - -	1 January -	The old sub-district of *Ryde* was divided into two sub-districts as follows:—The new sub-district of *Ryde* comprises the parishes of Binstead, Ryde, and St. Helen's (population 17,846); and the new sub-district of *Brading* comprises part of the parish of Newchurch formerly in the old sub-district of Ryde, and the parishes of Brading, Yaverland, and Shanklin (population 11,979). The sub-districts of *Godshill* and *Calbourne* were re-numbered 5 and 6.
181	Newmarket - -	1 October -	The sub-districts of *Gazeley* and *Cheveley* were united under the name of *Cheveley*, and the parish of Newmarket All Saints transferred from the *Cheveley* sub-district to that of *Newmarket*. The sub-districts were re-numbered as follows:—1. *Cheveley* (population 8,845), 2. *Newmarket* (population 13,139), and 3. *Soham* (population 8,448).
186	West Ham - -	1 January -	The old sub-district of *West Ham* was divided into two parts as follows:—The *West Ham* sub-district comprises the part of the parish of West Ham formerly in West Ham sub-district (population 161,920); and *East Ham* sub-district comprises the parishes of East Ham and Little Ilford (population 32,710). The sub-districts of *Leyton* and *Walthamstow* were re-numbered 4 and 5.
194	Maldon - - -	1 August -	The sub-district of *St. Peter* was dissolved and the parishes which it formerly comprised were distributed as follows:—The parishes of St. Peter and St. Mary, Langford, and Ulting were added to the sub-district of *All Saints* (re-named *Maldon*); and the parishes of Wickham Bishops, Great Braxted, Little Braxted, Great Totham, Little Totham, and Heybridge were added to the sub-district of *Tollesbury*. The sub-districts were re-numbered thus:—1. *Southminster* (population 4,766), 2. *Bradwell* (population 2,516), 3. *Maldon* (population 8,732), and 4. *Tollesbury* (population 7,465).

Table 57.—ENGLAND. Changes in the Constitution of Registration Districts and Sub-districts during the Year 1890—*continued.*

No. of District.	NAME OF REGISTRATION DISTRICT.	Date of Change.	Nature of Change.
213	IPSWICH - - -	1890. 1 January -	The sub-district of *St. Margaret* was dissolved and its parts distributed between the two other sub-districts in the IPSWICH district as follows:—The parishes of St. Mary-at-the-Tower, St. Stephen, and Westerfield were added to the sub-district of *St. Matthew*, which was re-named *Ipswich Western*; and the parishes of St. Helen and St. Margaret were added to the sub-district of *St. Clement*, which was re-named *Ipswich Eastern*. The sub-districts were re-numbered thus:—1. *Ipswich Western* (population 27,427), and 2. *Ipswich Eastern* (population 29,654).
369	LICHFIELD - -	1 August -	The sub-districts of *Yoxall* and *Rugeley* were united under the name of *Rugeley* (aggregate population 14,458).
396	STRATFORD-ON-AVON -	1 November	The *Stratford-on-Avon* sub-district was dissolved, and of its constituent parishes that of Snitterfield was added to the *Wootton Wawen* sub-district; and all the remaining parishes, viz., Stratford-on-Avon, Atherstone-on-Stour, Whitchurch, Alderminster, Clifford Chambers, and Preston-on-Stour were added to the *Old Stratford* sub-district, which was re-named *Stratford-on-Avon*. The sub-districts in the STRATFORD-ON-AVON district were re-numbered thus:—1. *Wellesbourne* (population 5,752), 2. *Stratford-on-Avon* (population, 11,788), and 3. *Wootton Wawen* (population 4,353).
431	NOTTINGHAM - -	1 April -	The sub-district of *Byron* was united to that of *St. Ann*, and this amalgamation having completed the original scheme, the names of the different sub-districts were altered and re-numbered as follows:—1. *Lenton* re-named *Nottingham South-West* (population 28,558), 2. *Radford* re-named *Nottingham North-West* (population 54,885), 3. *St. Ann* re-named *Nottingham North-East* (population 52,597), and 4. *Exchange* re-named *Nottingham South-East* (population 40,880).
477	FYLDE - - -	1 January -	The old sub-district of *Poulton-le-Fylde* was divided into two sub-districts, viz.:—The parishes of Bispham-with-Norbreck, Layton-with-Warbreck, the part of Marton previously situated in *Poulton-le-Fylde* sub-district, and Hardhorn-with-Newton were constituted a new sub-district named *Blackpool* (population 25,556); and the remaining parishes, viz., Carleton, Poulton-le-Fylde, Thornton, and Great and Little Singleton, together with the two parishes of Little Eccleston-with-Larbreck and Elswick (transferred from the sub-district of *Kirkham*), were constituted a new sub-district named *Fleetwood* (population 12,888).
587	PONTYPRIDD - -	1 October -	The sub-district of *Pontypridd* was divided into two sub-districts, viz.:—The two parishes of Llanfabon and Eglwysilan forming one sub-district, named *Eglwysilan* (population 18,832), and the parish of Llanwonno forming the other sub-district, named *Llanwonno* (population 30,712).

NOTE.—No change affecting the population of any registration District or Sub-district was made during 1890 under the provisions of the Divided Parishes and Poor Law Amendment Acts, 1876 and 1879.

* The *Registration Counties* consist of groups of Registration Districts, which are generally co-extensive with the Poor Law Unions. A District which extends into two or more Geographical Counties is included entirely in that Registration County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties differ therefore more or less from the boundaries of the Geographical Counties. For areas and populations of the Registration Divisions and Counties, see pages 64–67.

* The 632 *Registration Districts* (Paddington 1a and Holyhead 630b having been constituted Registration Districts since the numerical arrangement 1 to 630) were adopted on 1st January 1881) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to the local position, under the Registration Counties. The Registration Sub-districts (2124 in number at the end of the year 1890) are sub-divisions of Registration Districts, within which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates a Hospital or Infirmary; *L* a Lunatic Asylum; and repetitions of these letters show the number of such Institutions in each Registration sub-district.

† The Deaths in the principal Institutions in England in 1890 are given on pages 71-94.

‡ 3 : 1, 2, 3.—On 1st Oct. 1890 the Registration District of Chelsea was re-divided into three districts as follows: the detached part of Chelsea parish situated at Kensal Green to form the *Chelsea Kensal Town* sub district; and the portions to the north and south respectively of the middle of King's Road to form *Chelsea North* and *Chelsea South* sub-districts. *See* Table 57, pp. lxxv-lxxvi.

* 1, 2.—On the 1st October 1890, the three sub-districts of Marden, Loose, and Yalding were dissolved, and the parishes of which they consisted rearranged into two sub-districts, viz., *Yalding* and *Loose*. The Births and Deaths are shown as if the change had come into operation at the beginning of the year. *See* Table 37, pp. lxxv-lxxvi.

* 181 : 1, 2.—On the 1st October 1890, the Gazeley sub-district was amalgamated with the *Cheveley* sub-district, and the parish of Newmarket All Saints was transferred from the Cheveley sub-district to the Newmarket sub-district. The Births and Deaths are shown as if the change had come into operation at the beginning of the year. *See* Table 57, pp. lxiv-lxxvi.

† 186 : 2, 3.—On 1st January 1890, the Registration sub district of *West Ham* was divided into two sub-districts, which are named *West Ham* and *East Ham*.

* 369 : 2.—On the 1st of August 1890, the sub-districts of *Yoxall* and *Rugeley* were united for registration purposes under the name of *Rugeley* sub-district. The Births and Deaths are shown as if the change had come into operation at the beginning of the year. See Table 57, pp. lxxv-lxxvi.

† 371.—The District of Wolverhampton comprises the two Poor Law Unions of Seisdon (Tettenhall, Kinver and Womborn sub-districts), and Wolverhampton (Wolverhampton Western, Wolverhampton Eastern, Willenhall, and Bilston sub-districts).

* 396 : 2, 3.—On the 1st November 1890, the Stratford-on-Avon sub-district was dissolved, and of its constituent parishes, that of Snitterfield was added to the *Wootton Wawen* sub-district, and all the remaining parishes were added to the old Stratford sub-district which was re-named the *Stratford on-Avon* sub-district. The Births and Deaths are shown as if the change had come into operation at the beginning of the year. *See* Table 57, pp. lxxv-lxxvi.

* 431.—On the 1st of April 1890 the sub-district of Byron was added to that of St. Ann, and the four sub districts of Lenton, Radford, St. Ann, and Exchange were respectively renamed *Nottingham South-West*, *Nottingham North-West*, *Nottingham North-East*, and *Nottingham South-East* sub-districts. The Births and Deaths are shown as if the change had come into operation at the beginning of the year. *See* Table 57, pp. lxxv-lxxvi.

* NOTE: 1, 2.—On the 1st October 1890, the sub-district of Pontypridd was divided into two sub-districts, viz., the parish of Llanwonno to form the *Llanwonno* sub-district; and the two parishes of Llanfabon and Eglwysilan to form the *Eglwysilan* sub-district. The births and deaths are shown as if the change had come into operation at the beginning of the year. See Table 37, pp. lxxv-lxxvi.

DEATHS IN WORKHOUSES, HOSPITALS, AND PUBLIC LUNATIC ASYLUMS.

1890.

The following Table shows the numbers of deaths (Persons, Males, and Females) registered during 1890 in the Workhouses, Hospitals, and Public Lunatic Asylums of England. These figures afford the means of correcting the mortality of districts and sub-districts in which these Institutions are situated. The Table includes 1838 Institutions; of which 741 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 1007 Hospitals or Infirmaries; and 90 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients (held on that account to be public for the purposes of this Table) are also included. In these 1838 Institutions 65,161 deaths were registered during the year, or 11·6 per cent. of the total deaths in England and Wales, against 11·4 and 11·2 per cent. in the two preceding years; 39,346 occurred in Workhouses, 19,655 in Hospitals, and 6160 in Lunatic Asylums. The proportion to total deaths was 7·0 per cent. in Workhouses, 3·5 in Hospitals, and 1·1 in Lunatic Asylums. The proportion of deaths recorded in Workhouses, which had been 6·9 and 6·6 per cent. in 1888 and 1889, rose again to 7·0 per cent. in 1890.

Information relating to the deaths recorded in many Private Lunatic Asylums, Private Asylums for Idiots and Imbeciles, and in a few other institutions, will be found in the notes to the following pages.

Deaths in Workhouses, Hospitals, and Public Lunatic Asylums, 1890.

* In this classification of Violent Deaths the totals of the sub-divisions Burns, Scalds, &c., Drowning, and Suffocation, necessarily differ from the totals of the headings bearing similar names in the classification of Causes of Death on pp. 120, 121, as the classification here takes account of the cause of the injury, and there only of the nature of the injury.

England.—Deaths from Accident and Negligence at different Periods of Life, in the Year 1890—Males—*continued.*

* The deaths of 4 males from Hydrophobia in the year are classed under Zoogenous Diseases in the Table of Causes of Death (see p. 112)
† When a person dies from an operation, performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury.

Of the above 11600 Accidents, 131 are stated to have occurred to Men in a state of Intoxication, and 5 to Men suffering from Delirium Tremens. And in 311 other cases Death was accelerated by the supervention of Erysipelas, Mortification, Pyæmia, or Tetanus. Here follow the details:—

Causes inducing or accelerating Deaths from Accident.	All Ages.	Total under 1 Year. Infants under 1 Month.	Total under 1 Year. Others.	1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.
Intoxication at time of Accident	131	-	-	-	-	-	-	-	-	-	2	4	33	27	28	24	12	1	-
Delirium Tremens ditto	5	-	-	-	-	-	-	-	-	-	-	1	-	2	1	1	-	-	-
Acceleration by Erysipelas	28	-	-	-	-	1	-	1	-	-	1	1	2	4	5	1	7	5	1
Acceleration by Mortification	20	-	-	-	-	-	-	-	2	-	-	-	1	-	2	3	6	6	-
Acceleration by Pyæmia	137	1	1	5	-	4	2	13	7	5	6	3	18	22	20	25	16	2	-
Acceleration by Tetanus *	126	1	-	2	1	1	3	8	7	27	11	13	18	8	13	12	3	1	-

* *Cases of tetanus which are not stated to be the result of injury are classed as "Idiopathic Tetanus" in the Table of Causes of Death (see page 114).*

* The deaths of 4 females from Hydrophobia in the year are classed under Zoogenous diseases, in the Table of Causes of Death (see p. 1
† When a person dies from an operation, performed on account of any disease or injury the nature of which is stated in the certificat the death is classed under that disease or injury.

Of the above 4663 Accidents, 63 are stated to have occurred to Women in a state of Intoxicati and 19 to Women suffering from Delirium Tremens. And in 64 other cases Death was accelerated the supervention of Erysipelas, Mortification, Pyæmia, or Tetanus.* Here follow the details:-

Causes inducing or accelerating Deaths from Accident.	All Ages.	Total under 1 Year. Infants under 1 Month.	Others.	1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–
Intoxication at time of Accident	63	–	–	–	–	–	–	–	–		–	1	7	17	17	15	4	2
Delirium Tremens, ditto	19	–	–	–	–	–	–	–	2	–	–	5	2	–	–	8	2	2
Acceleration by Mortification	11	–	–	1	–	–	1	2	2	–	–	1	–	–	–	1	2	2
Acceleration by Pyæmia	35	–	1	–	1	–	1	5	–	4	–	1	1	3	3	2	1	4
Acceleration by Tetanus*	20	1	–	–	–	1	–	2	4	5	–	–	3	3			1	1

* Cases of Tetanus which are not stated to be the result of injury are classed as "Idiopathic Tetanus" in the Table of Causes of Death (see page 115).

INDEX OF REGISTRATION DISTRICTS.

The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report.* The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881. Since that date two new Registration Districts have been formed, the District of Kensington (1) having been divided into Paddington (1*a*) and Kensington (1*b*), and the District of Anglesey (630) into Anglesey (630*a*) and Holyhead (630*b*).

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Registration Districts," see the "Index of Registration Sub-districts" (pp. 208–217) *and "Index of certain Towns"* (pp. 218, 219).

INDEX OF REGISTRATION SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having compo *names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will found under the letter E, and not under G; St. James under the letter S, and not as "James, St." number against each Sub-District, in the third column, refers to its numerical place in the Tables Abstracts; thus, Abbey Holme (573; 2) is the 2d Sub-District of the Wigton District, No. 573.]

Sub-District.	District.	No.
A		
Abbey Holme	Wigton	573; 2
Abbots Bromley	Uttoxeter	366; 2
Abbotsbury	Weymouth	264; 4
Abbots Langley	Watford	137; 4
